Rapid Prototyping Software for Avionics Systems Nicolas Larrieu,Antoine Varet,2014-10-13 The design implementation and validation of avionics and aeronautical systems have become extremely complex tasks due to the increase of functionalities that are deployed in current avionics systems and the need to be able certify them before putting them into production This book proposes a methodology to enable the rapid prototyping of such a system by considering from the start the certification aspects of the solution produced This method takes advantage of the model based design approaches as well as the use of formal methods for the validation of these systems Furthermore the use of automatic software code generation tools using models makes it possible to reduce the development phase as well as the final solution testing This book presents firstly an overview of the model based design approaches such as those used in the field of aeronautical software engineering Secondly

an original methodology that is perfectly adapted to the field of aeronautical embedded systems is introduced Finally the authors illustrate the use of this method using a case study for the design implementation and testing of a new generation aeronautical router

Tool-Based Requirement Traceability between Requirement and Design Artifacts Bernhard Turban, 2013-04-16 Processes for developing safety critical systems impose special demands on ensuring requirements traceability Achieving valuable traceability information however is especially difficult concerning the transition from requirements to design Bernhard Turban analyzes systems and software engineering theories cross cutting the issue embedded systems development systems engineering software engineering requirements engineering and management design theory and processes for safety critical systems As a solution the author proposes a new tool approach to support designers in their thinking in order to achieve traceability as a by product to normal design activities and to extend traceability information with information about design decision rationale

Universal Traceability. A Comprehensive, Generic, Technology-Independent, and Semantically Rich Approach Hannes Schwarz, 2012 Traceability describes the ability of stakeholders to understand and follow relationships between artifacts that play some role in software development It is essential for many development tasks e g quality assurance requirements management or software maintenance Aiming to overcome various deficiencies of existing traceability concepts this book presents a universal approach describing required features of traceability solutions This includes a technology independent generic template for the definition of semantically rich traceability relationship types and technology independent patterns for the retrieval of traceability information reflecting generic problems common to traceability

applications The universal approach is implemented on the basis of two concrete technologies which facilitate comprehensive traceability the TGraph approach and OWL ontologies The applicability of the approach is shown by three case studies dealing with the reuse of software artifacts process model refinement and requirements management respectively
