Mathematical Models And Methods For Smart Materials Mauro Fabrizio, Barbara Lazzari, Angelo Morro, 2002-12-16 This book contains the papers presented at the conference on Mathematical Models and Methods for Smart Materials held in Italy in 2001 The papers are divided into four parts Methods in Materials Science deals mainly with mathematical techniques for the investigation of physical systems such as liquid crystals materials with internal variables amorphous materials and thermoelastic materials Also techniques are exhibited for the analysis of stability and controllability of classical models of continuum mechanics and of dynamical systems Modelling of Smart Materials is devoted to models of superfluids superconductors materials with memory nonlinear elastic solids and damaged materials In the elaboration of the models thermodynamic aspects play a central role in the characterization of the

constitutive properties Well Posedness in Materials with Memory deals with existence uniqueness and stability for the solution of problems most often expressed by integrodifferential equations which involve materials with fading memory Also attention is given to exponential decay in viscoelasticity inverse problems in heat conduction with memory and automatic control for parabolic equations Analytic Problems in Phase Transitions discusses nonlinear partial differential equations associated with phase transitions and hysteresis possibly involving fading memory effects Particular applications are developed for the phase field model with memory the Stefan problem with a Cattaneo type equation the hysteresis in thermo visco plasticity and the solid solid phase transition

Non-Standard and Improperly Posed Problems William F. Ames, Brian Straughan, 1997-07-07 Written by two international experts in the field this book is the first unified survey of the advances made in the last 15 years on key non standard and improperly posed problems for partial differential equations This reference for mathematicians scientists and engineers provides an overview of the methodology typically used to study improperly posed problems It focuses on structural stability the continuous dependence of solutions on the initial conditions and the modeling equations and on problems for which data are only prescribed on part of the boundary The book addresses continuous dependence on initial time and spatial geometry and on modeling backward and forward in time It covers non standard or non characteristic problems such as the sideways problem for a heat or hyperbolic equation and the Cauchy problem for the Laplace equation and other elliptic equations The text also presents other relevant improperly posed problems including the uniqueness and continuous dependence for singular equations the spatial decay in improperly posed parabolic problems the uniqueness for the backward in time Navier Stokes equations on an unbounded domain the improperly posed problems for dusty gases the linear thermoelasticity and the overcoming Holder continuity and image restoration Provides the first unified survey of the advances made in the last 15 years in the field Includes an up to date compendium of the mathematical literature on these topics

Functional Spaces for the Theory of Elliptic Partial Differential Equations Françoise Demengel, Gilbert Demengel, 2012-01-24 The theory of elliptic boundary problems is fundamental in analysis and the role of

spaces of weakly differentiable functions also called Sobolev spaces is essential in this theory as a tool for analysing the regularity of the solutions This book offers on the one hand a complete theory of Sobolev spaces which are of fundamental importance for elliptic linear and non linear differential equations and explains on the other hand how the abstract methods of convex analysis can be combined with this theory to produce existence results for the solutions of non linear elliptic boundary problems The book also considers other kinds of functional spaces which are useful for treating variational problems such as the minimal surface problem The main purpose of the book is to provide a tool for graduate and postgraduate students interested in partial differential equations as well as a useful reference for researchers active in the field Prerequisites include a knowledge of classical analysis differential calculus Banach and Hilbert spaces integration and the related standard functional spaces as well as the Fourier transformation on the Schwartz space There are complete and detailed proofs of almost all the results announced and in some cases more than one proof is provided in order to highlight different features of the result Each chapter concludes with a range of exercises of varying levels of difficulty with hints to solutions provided for many of them Proceedings Cambridge Philosophical Society, 1944
