This behavior is functional: the reduction of distractions in the environment can improve performance on cognitive tasks including memory retrieval. Reduction of visual distractions can be operationalized through eye closure, gaze aversion or by comparing exposure to simple and complex visual displays respectively. Reduction of auditory distractions is typically examined by comparing performance under quiet and noisy conditions. Theoretical reasoning regarding this phenomenon draws on various psychological principles including embodied cognition, cognitive load and modality specific interference. Practical applications of the research topic are diverse. For example, the findings could be used to improve performance in forensic settings e.g. eyewitness testimony; educational settings e.g. exam performance; occupational settings e.g. employee productivity or medical settings e.g. medical history reporting. This Research Topic welcomes articles from all areas of psychology relating to the reduction of distractions to improve task performance. Articles can address but are not limited to: new empirical findings; comprehensive reviews; theoretical frameworks; opinion pieces or discussions of practical applications.      CUET (UG)-Common Universities Entrance Test for Under Graduate Programmes: Agriculture Subject Ebook-PDF Chandresh Agrawal, Nandini Books, 2024-07-16 *SGN The Ebook CUET UG Common Universities Entrance Test for Under Graduate Programmes Agriculture Subject* Covers Objective Questions From Various Competitive Exams With Answers.      **Annual Report** Northern Nut Growers Association,      **CUET (PG) Agricultural Science PDF Common University**
