connectivity and standards particularly TCP/IP is dramatically changing the face of information technology and driving requirements for ever more secure, scalable and highly available mainframe TCP/IP implementations. The IBM z/OS Communications Server TCP/IP Implementation series provides understandable step-by-step guidance about how to enable the most commonly used and important functions of z/OS Communications Server TCP/IP. This IBM Redbooks publication provides useful implementation scenarios and configuration recommendations for many of the TCP/IP standard applications that z/OS Communications Server supports. For more specific information about z/OS Communications Server standard applications, high availability and security, see the other volumes in the series: IBM z/OS V1R13 Communications Server TCP/IP Implementation Volume 1: Base Functions, Connectivity and Routing (SG24-7996); IBM z/OS V1R13 Communications Server TCP/IP Implementation Volume 3: High Availability, Scalability and Performance (SG24-7998); IBM z/OS V1R13 Communications Server TCP/IP Implementation Volume 4: Security and Policy Based Networking (SG24-7999). For comprehensive descriptions of the individual parameters for setting up and using the functions that we describe in this book, along with step-by-step checklists and supporting examples, see the following publications: z/OS Communications Server IP Configuration Guide (SC31-8775); z/OS Communications Server IP Configuration Reference (SC31-8776); z/OS Communications Server IP User's Guide and Commands (SC31-8780). This book does not duplicate the information in those publications. Instead, it complements them with practical implementation scenarios that can be useful in your environment. To determine at what level a specific function was introduced, see z/OS Communications Server New Function Summary (GC31-8771). For complete details, we encourage you to review the documents that are listed in the additional resources section at the end of each chapter.

Improving Productivity with IBM ISPF Productivity Tool V7.1 for z/OS Michael Rotter, Eugenie Alexander, Rodney Almodovar, Balachandran Chandrasekaran, Pearlson Christopher, Steve Coalbran, Mark Leung, Jean Mothersele, Chaitra Narayanaswamy, Kevin Neubert, Richard Pace, Walter Zakorchemny, IBM Redbooks, 2013-04-24. This IBM Redbooks publication introduces the IBM Interactive System Productivity Facility (ISPF) Productivity Tool (IPT) Version 7 Release 1 for IBM z/OS. IPT operates as a seamlessly integrated front end to ISPF. Note the following points: IPT functionality is available from any panel without a need to modify any ISPF Primary Options Menu. All IPT functions are totally integrated. IPT can perform almost any activity within ISPF or internally invoke the function that can perform the task. IPT combines separately provided ISPF utility functions and new ISPF Productivity Tool features into the Object List (OLIST) and Member Selection List (MSL). The resulting members, datasets and Object Lists become powerful platforms where you can perform many tasks without navigating to other utilities. IPT relates objects to applications in a similar manner to the way that a PC performs Object Linking and Embedding (OLE). By extending the dataset objects that are used by ISPF to other object classes, IPT lets you specify the object to be processed and the action that is performed, such as EDIT or BROWSE. The facility that is appropriate to the object class for the action that you have requested is invoked automatically. IPT provides extensive search

capabilities that are both rapid and intuitive You can easily search for volumes datasets members and text within members ISPF Productivity Tool also furnishes automatic drill down system navigation to examine volumes datasets and members IPT provides a menu driven facility to display and recover all of the deleted members of a partitioned dataset PDS library IPT extends the ISPF action bar with options that provide access to new functionality so that you do not have to learn new commands or syntax In addition to the ISPF Point and Shoot capabilities IPT provides new concepts such as hotbars user defined fields that execute commands field sensitive areas in MSLs and OLISTs automatic recognition of a dataset name on any ISPF panel as a parameter to BROWSE EDIT or VIEW or parameters within any Time Sharing Option TSO command IPT provides integrated and enhanced IBM Software Configuration and Library Manager SCLM support within the standard member and dataset lists SCLM is a source library management component of ISPF that provides change control multiple source versions auditing a built in make facility and automatic check in sign out using standard libraries PDS and partitioned dataset extended PDSE IPT includes built in interfaces to various IBM and ISV products IPT includes a new batch utility that provides a seamlessly integrated front end to the IBM IEBCOPY utility In addition to supporting all IEBCOPY standard functionality it includes additional major enhancements This book is intended as a supplement to existing product manuals It opens with an overview of the main IPT concepts and facilities and follows with detailed chapters which are each dedicated to a major IPT function Practical scenarios accompanied by window captures and coding examples demonstrate how both experienced ISPF users and those new to the IBM z OS environment can benefit from the IPT enhanced functionality in each case [Computing Resources of the Division of Computer Research and Technology National Institutes of Health \(U.S.\)](#)
