The first and only guide of its kind, IBM Cognos Business Intelligence v10 offers expert insights for BI designers, architects, developers, administrators, project managers, nontechnical end users, and partners throughout all areas of the business, from sales and marketing to operations and lines of business. If you're pursuing official IBM Cognos certification, you'll also find Cognos certification sample questions and information to help you with the certification process. Coverage includes understanding IBM Cognos BI's components and open extensible architecture; working with IBM Cognos key studio tools: Analysis Studio, Query Studio, Report Studio, and Event Studio; developing and managing powerful reports that draw on the rich capabilities of IBM Cognos Workspace and Workspace Advanced; designing Star Schema databases and metadata models to answer the questions your organization cares about most; efficiently maintaining and systematically securing IBM Cognos BI environments and their objects; using IBM Cognos Connection as your single point of entry to all corporate data; building interactive, easy-to-manage Active Reports for casual business users; using new IBM Cognos BI v10.1 Dynamic Query Mode (DQM) to improve performance with complex heterogeneous data; identifying, exploring, and exploiting hidden data relationships; creating quick ad hoc queries that deliver fast answers; establishing user and administrator roles.

Implementing an Advanced Application Using Processes, Rules, Events, and Reports Ahmed Abdel-Gayed, Kulvir Singh Bhogal, Don Carr, Richard Davies, Aditya P. Dutta, Marcelo Correia Lima, Agueda Martinez Hernandez Magro, Yuka Musashi, Michael Norris, Felix Pistorius, Martin Keen, IBM Redbooks, 2012-10-12. In this IBM Redbooks publication, we describe how to build an advanced business application from end to end. We use a fictional scenario to define the application, document the deployment methodology, and confirm the roles needed to support its development and deployment. Through step-by-step instructions, you learn how to: Define the project lifecycle using IBM Solution for Collaborative Lifecycle Management; Build a logical and physical data model in IBM InfoSphere Data Architect; Confirm business rules and business events using IBM WebSphere Operational Decision Management; Map a business process and mediation using IBM Business Process Manager; Use IBM Cognos Business Intelligence to develop business insight; In addition, we articulate a testing strategy using IBM Rational Quality Manager and deployment options using IBM Workload Deployer. Taken together, this book provides comprehensive guidance for building and testing a solution using core IBM Rational Information Management, WebSphere Cognos, and Business Process Management software. It seeks to demystify the notion that developing and deploying advanced solutions is taxing. This book will appeal to IT architects and specialists who seek straightforward guidance on how to build comprehensive solutions. They will be able to adapt these materials to kick start their own end-to-end projects. IBM Cognos Business Intelligence V10.1: Intelligence Unleashed Dean Browne, IBM Redbooks, 2010-10-25. Organizations are pressured constantly to understand and react quickly to information. In addition, the complexity and volumes of data for all aspects of the environments in which organizations operate is increasing. Markets, regulatory environments, customer, and

supplier data competitive information and internal operational information all impact how data is viewed and interpreted. With a capable and efficient business intelligence BI solution, all levels of an organization can receive information, how, when, and where they need it to make faster and better aligned decisions. Every user can have access to all the capabilities of the BI solution, and often organizations can determine a user's business need to access information using typical characteristics that are defined by that user's role. Many organizations often satisfy this complexity and these diverse demands with a number of point solutions. With IBM Cognos Business Intelligence BI, you can satisfy needs throughout the user community and ensure that everyone can work and collaborate from a consistent set of data. In addition, IT is simplified with fewer components to deploy, manage, and maintain. Organizations need to make the most of a workforce that is increasingly driven to multi-task, network, and collaborate. IBM Cognos BI delivers analytics that everyone in the organization can use to answer key business questions. This IBM Redguide™ publication highlights features of IBM Cognos BI version 10.1. *IBM Cognos Dynamic Cubes* Dmitriy Beryozha, MaryAlice Campbell, Cesar Cardorelle, Tod Creasey, David Cushing, Vlaunir Da Silva, Sean David, Avery Hagleitner, Ian Henderson, Daniel Howell, Igor Kozine, Paul Prieto, Paul Thompson, Jose Vazquez, Ying Zhang, IBM Redbooks, 2015-07-31. IBM Cognos Business Intelligence BI provides a proven enterprise BI platform with an open data strategy. Cognos BI provides customers with the ability to use data from any source, package it into a business model, and make it available to consumers in various interfaces that are tailored to the task. IBM Cognos Dynamic Cubes complements the existing Cognos BI capabilities and continues the tradition of an open data model. It focuses on extending the scalability of the IBM Cognos platform to enable speed of thought analytics over terabytes of enterprise data without having to invest in a new data warehouse appliance. This capability adds a new level of query intelligence so you can unleash the power of your enterprise data warehouse. This IBM Redbooks publication addresses IBM Cognos Business Intelligence V10.2.2 and specifically the IBM Cognos Dynamic Cubes capabilities. This book can help you in the following ways: Understand core features of the Cognos Dynamic Cubes capabilities of Cognos BI V10.2. Learn by example with practical scenarios by using the IBM Cognos samples. This book uses fictional business scenarios to demonstrate the power and capabilities of IBM Cognos Dynamic Cubes. It primarily focuses on the roles of the modeler, administrator, and IT architect. *IBM Cognos 10 Report Studio* Filip Draskovic, Roger Johnson, 2012. IBM Cognos 10 is the next generation of the leading performance management analysis and reporting standard for mid to large-sized companies. One of the most exciting and useful aspects of IBM Cognos software is its powerful custom report creation capabilities. After learning the basics, report authors in the enterprise need to apply the technology to reports in their actual complex work environment. This book provides that advanced know-how. Using practical examples based on years of teaching experiences as IBM Cognos instructors, the authors provide you with examples of typical advanced reporting designs and complex queries in reports. The reporting solutions in this book can be directly used in a variety of real-world scenarios to provide answers to your business problems today. The

complexity of the queries and the application of design principles go well beyond basic course content or introductory books IBM Cognos 10 Report Studio Practical Examples will help you find the answers to specific questions based on your data and your business model It will use a combination tutorial and cookbook approach to show real world IBM Cognos 10 Report Studio solutions If you are still using IBM Cognos 8 BI Report Studio many of the examples have been tested against this platform as well The final chapter has been dedicated to showing those features that are unique to the latest version of this powerful reporting solution

Co-locating Transactional and Data Warehouse Workloads on System z Mike Ebberts, Dino Tonelli, Jason Arnold, Patric Becker, Yuan-Chi Chang, Willie Favero, Shantanu Kethireddy, Nin Lei, Shirley Lin, Ron Lounsbury, Susan Widing Lynch, Cristian Molaro, Deepak Rangarao, Michael Schapira, IBM Redbooks, 2010-12-03 As business cycles speed up many customers gain significant competitive advantage from quicker and more accurate business decision making by using real data For many customers choosing the path to co locate their transactional and analytical workloads on System z better leverages their existing investment in hardware software and skills We created a project to address a number of best practice questions on how to manage these newer analytical type workloads especially when co located with traditional transactional workloads The goal of this IBM Redbooks publication is to provide technical guidance and performance trade offs associated with resource management and potentially DB2 data sharing in a variety of mixed transactional data warehouse System z topologies The term co location used here and in the rest of the book is specifically defined as the practice of housing both transactional OLTP and data warehouse analytical workloads within the same System z configuration We also assumed that key portions of the transactional and data warehouse databases would reside on DB2 for z OS The databases may or may not reside in a DB2 data sharing environment we discuss those pros and cons in this book The intended audience includes DB2 data warehouse architects and practitioners who are facing choices in resource management and system topologies in the data warehouse arena This specifically includes Business Intelligence BI administrators DB2 database administrators DBAs and z OS performance administrators systems programmers In addition decision makers and architects can utilize this book to assist in making platform and database topology decisions The book is divided into four parts Part I Introducing the co location project covers the System z value proposition and why one should consider System z as the central platform for their data warehousing business analytics needs Some topics are risk avoidance via data consolidation continuous availability simplified disaster recovery IBM Smart Analytics Optimizer reduced network bandwidth requirements and the unique virtualization and resource management capabilities of System z LPAR z VM and WLM Part I also provides some of the common System z co location topologies along with an explanation of the general pros and cons of each This would be useful input for an architect to understand where a customer is today and where they might consider moving to Part II Project environment covers the environment products workloads workload drivers and data models implemented for this study The environment consisted of a logically partitioned z10TM 32way running z VM Linux

and z OS operating system instances On those instances we ran products such as z OS DB2 V9 IBM Cognos Business Intelligence Version 8.4 for Linux on System z InfoSphere™ Warehouse for System z InfoSphere Change Data Capture z OS WebSphere V7 Tivoli Omegamon for DB2 Performance expert Utilizing these products we created transactional OLTP data warehouse query and data warehouse refresh workloads All the workloads were based on an existing web based transactional Bookstore workload that is currently utilized for internal testing within the System p and z labs While some IBM Cognos BI and ISWz product usage and experiences information is covered in this book we do not go into the depth typically found in IBM Redbooks publications since there is another book focused specifically on that

Modeling Languages in Mathematical Optimization Josef Kallrath, 2013-12-01 This volume presents a unique combination of modeling and solving real world optimization problems It is the only book which treats systematically the major modeling languages and systems used to solve mathematical optimization problems and it also provides a useful overview and orientation of today's modeling languages in mathematical optimization It demonstrates the strengths and characteristic features of such languages and provides a bridge for researchers practitioners and students into a new world solving real optimization problems with the most advances modeling systems

Optimal operation, configuration and sizing of energy storage and energy conversion technologies for residential house energy systems Tobias Alexander Beck, 2020-06-23 In recent years a rapid growth in the interest in self consumption of electricity generated by distributed electricity generation technologies such as rooftop photovoltaic PV systems has been observed in the residential sector Due to this development future residential house energy systems will face an increased complexity with respect to operation system configuration and sizing of generation and storage technologies In this thesis a mixed integer linear programming model for the integrated operation configuration and sizing of house energy systems is developed and discussed with respect to its applicability to the specifics of self consumption in residential dwellings The conducted scenario analysis shows that over a wide range of assumptions PV is a robust measure to decrease the total cost of ownership for heat pump and gas boiler based house energy systems The existence of a feed in tariff and the electricity price structure have a much larger influence on the results than the energy price development A feed in tariff generally incentivizes larger PV systems with higher levels of self sufficiency whereas small demand driven PV systems with high levels of self consumption are favored in absence of a feed in tariff Overall the proposed model is regarded as applicable for the identified minimum flexibility requirements for the employed generation technologies The results from the scenario computations provide a clear and robust picture of the role of electricity generation technologies and flexibility options for future house energy systems
