SAN Boot Implementation and Best Practices Guide for IBM System Storage Sangam Racherla, Delmar Demarchi, Scott Dybas, Bobby Stark, Mansoor Syed, IBM Redbooks, 2012-09-30 Booting servers from a storage area network SAN is being used increasingly in complex data center environments today due to its significant benefits over the traditional method of booting from local disks SAN Boot enables organizations to maximize consolidation of their IT resources minimize their equipment costs and realize the considerable management benefits of centralizing the boot process In SAN Boot you can deploy diskless servers in an environment where the boot disk is located on often RAID capable storage connected to the SAN The server initiator communicates with the storage device target through the SAN using the Fibre Channel host bus adapter HBA The system downtime is greatly minimized in case a critical component such as a processor memory or host bus adapter fails and needs to be replaced The system administrator needs to swap only the hardware and reconfigure the HBA's BIOS switch zoning and host port definitions on the storage server The

system image still exists on the logical drive therefore the server is fully operational after the hardware swap and configuration change is completed This IBM Redbooks publication can help you with the SAN Boot implementation We present various SAN Boot scenarios using IBM System Storage products that include DS5000 DS8000 XIV and SVC The operating systems that are covered include Windows 2008 Red Hat Linux SUSE Linux and VMware *IBM i and IBM Storwize Family: A Practical Guide to Usage Scenarios* Sabine Jordan,Mario Kisslinger,Rodrigo Jungi Suzuki,IBM Redbooks,2015-01-13 The use of external storage and the benefits of virtualization became a topic of discussion in the IBM i area during the last several years The question tends to be what are the advantages of the use of external storage that is attached to an IBM i environment as opposed to the use of internal storage The use of IBM PowerVM virtualization technology to virtualize Power server processors and memory also became common in IBM i environments However virtualized access to external storage and network resources by using a VIO server is still not widely used This IBM Redbooks publication gives a broad overview of the IBM Storwize family products and their features and functions It describes the setup that is required on the storage side and describes and positions the different options for attaching IBM Storwize family products to an IBM i environment Basic setup and configuration of a VIO server specifically for the needs of an IBM i environment is also described In addition different configuration options for a combined setup of IBM PowerHA SystemMirror for i and the Storwize family products are described and positioned against each other Detailed examples are provided for the setup process that is required for these environments The information that is provided in this book is useful for clients IBM Business Partners and IBM service professionals who need to understand how to install and configure their IBM i environment with attachment to the Storwize family products [IBM FlashSystem 9100 Product Guide](#) Jon Herd,Tony Pacheco,IBM Redbooks,2020-05-20 This IBM Redbooks Product Guide publication describes IBM FlashSystem 9100 solution which is a comprehensive all flash and NVMe enabled enterprise storage solution that delivers the full capabilities of IBM FlashCore technology In addition it provides a rich set of software defined storage SDS features including data reduction and de duplication dynamic tiering thin provisioning snapshots cloning replication data copy services and IBM HyperSwap for high availability HA Scale out and scale up configurations further enhance capacity and throughput for better availability
