Logic, Language and Computation S. Akama, 2012-12-06 The editors of the Applied Logic Series are happy to present to the reader the fifth volume in the series a collection of papers on Logic Language and Computation One very striking feature of the application of logic to language and to computation is that it requires the combination the integration and the use of many diverse systems and methodologies all in the same single application The papers in this volume will give the reader a glimpse into the problems of this active frontier of logic The Editors CONTENTS Preface IX 1 S AKAMA Recent Issues in Logic Language and Computation 1 2 M J CRESSWELL Restricted Quantification 27 3 B H SLATER The Epsilon Calculus Problematic 39 4 K VON HEUSINGER Definite Descriptions and Choice Functions 61 5 N ASHER Spatio Temporal Structure in Text 93 6 Y NAKAYAMA DRT and Many Valued Logics 131 7 S AKAMA On Constructive Modality 143 8 H W ANSING Displaying as Temporalizing Sequent Systems for Subintuitionistic Logics 159 9 L FARINAS DEL CERRO AND V LUGARDON 179 Quantification and Dependence Logics 10 R SYLVAN Relevant Conditionals and Relevant Application Thereof 191 Index 245 Preface This is a collection of papers by distinguished researchers on Logic Linguistics Philosophy and Computer Science The aim of this book is to address a broad picture of the recent research on related areas In particular the contributions focus on natural language semantics and non classical logics from different viewpoints **Logic,**

Masuch, 2013-03-09 A selection of papers presented at the international conference Applied Logic Logic at Work held in Amsterdam in December 1992 Nowadays the term applied logic has a very wide meaning as numerous applications of logical methods in computer science formal linguistics and other fields testify Such applications are by no means restricted to the use of known logical techniques at its best applied logic involves a back and forth dialogue between logical theory and the problem domain The papers focus on the application of logic to the study of natural language in syntax semantics and pragmatics and the effect of these studies on the development of logic In the last decade the dynamic nature of natural language has been the most interesting challenge for logicians Dynamic semantics is here applied to new topics the dynamic approach is extended to syntax and several methodological issues in dynamic semantics are systematically investigated Other methodological issues in the formal studies of natural language are discussed such as the need for types modal operators and other logical operators in the formal framework Further articles address the scope of these methodological issues from other perspectives ranging from cognition to computation The volume presents papers that are interesting for graduate students and researchers in the field of logic philosophy of language formal semantics and pragmatics and computational linguistics **A Companion to Philosophical Logic** Dale Jacquette, 2008-04-15 This collection of newly commissioned essays by international contributors offers a representative overview of the most important developments in contemporary philosophical logic Presents controversies in philosophical implications and applications of formal symbolic logic Surveys major trends and offers original insights Mathematical Problems from Applied Logic I Dov M. Finite Model Theory and Its Applications Erich Grädel, Phokion G. Kolaitis, Leonid Libkin, Maarten Marx, Joel Spencer, Moshe Y. Vardi, Yde Venema, Scott Weinstein, 2007-06-04. Finite model theory as understood here is an area of mathematical logic that has developed in close connection with applications to computer science in particular the theory of computational complexity and database theory. One of the fundamental insights of mathematical logic is that our understanding of mathematical phenomena is enriched by elevating the languages we use to describe mathematical structures to objects of explicit study. If mathematics is the science of patterns then the media through which we discern patterns as well as the structures in which we discern them command our attention. It is this aspect of logic which is most prominent in model theory the branch of mathematical logic which deals with the relation between a formal language and its interpretations. No wonder then that mathematical logic and model theory in particular should find manifold applications in computer science from specifying programs to querying databases. Computer science is rife with phenomena whose understanding requires close attention to the interaction between language and structure. This volume gives a broad overview of some central themes of model theory expressive power descriptive complexity and zero one laws together with selected applications to database theory and artificial intelligence especially constraint databases and constraint satisfaction problems. The final chapter provides a concise modern introduction to modal logic which emphasizes the continuity in spirit and technique with model theory.

Artificial Intelligence, Automated Reasoning, and Symbolic Computation Jacques Calmet, Belaid Benhamou, Olga Caprotti, Laurent Henocque, Volker Sorge, 2003-08-02. AISC 2002 the 6th international conference on Artificial Intelligence and Symbolic Computation and Calculemus 2002 the 10th symposium on the Integration of Symbolic Computation and Mechanized Reasoning were held jointly in Marseille France on July 1-5 2002.

This event was organized by the three universities in Marseille together with the LSIS Laboratoire des Sciences de l'Information et des Systèmes AISC 2002 was the latest in a series of specialized conferences founded by John Campbell and Jacques Calmet with the initial title Artificial Intelligence and Symbolic Mathematical Computation AISMC and later denoted Artificial Intelligence and Symbolic Computation AISC The scope is well defined by its successive titles AISMC 1 1992 AISMC 2 1994 AISMC 3 1996 AISC 98 and AISC 2000 took place in Karlsruhe Cambridge Steyr Plattsburgh NY and Madrid respectively The proceedings were published by Springer Verlag as LNCS 737 LNCS 958 LNCS 1138 LNAI 1476 and LNAI 1930 respectively Calculemus 2002 was the 10th symposium in a series which started with three meetings in 1996 two meetings in 1997 and then turned into a yearly event in 1998 Since then it has become a tradition to hold the meeting jointly with an event in either symbolic computation or automated deduction Both events share common interests in looking at Symbolic Computation each from a different point of view Artificial Intelligence in the more general case of AISC and Automated Deduction in the more specific case of Calculemus

Spandrels of Truth J. C. Beall, 2009-04-09 Jc Beall presents a new theory of transparent truth A prominent philosophical view of truth is as an entirely see through device introduced for only practical expressive reasons Beall's modest dialetheic theory shows how the notorious paradoxes associated with transparency can be dealt with

Mistakes of Reason John Hayden Woods, 2005-01-01 Over a distinguished academic career the Canadian philosopher and scholar John Woods has written on a rich variety of topics central to contemporary philosophy These include the history and philosophy of logic deviant logics inductive and abductive reasoning informal reasoning fallacy theory the logic of fiction epistemology and abortion and euthanasia Not only has Woods work been significant in itself it has also stimulated others working in these fields Mistakes of Reason is a tribute to Woods and contains twenty six new essays by leading Canadian and international philosophers The essays are accompanied by commentaries by Woods himself creating a unique dialogue between Woods and his colleagues Editors Kent A Peacock and Andrew D Irvine have grouped the works

under the themes of Reality Knowledge Logic and Language Reasoning and Values The essays evaluate Woods work and celebrate the generous contribution that he has made to Canada s intellectual development over the past forty years *The Prague Bulletin of Mathematical Linguistics* ,1999

Analysis and Synthesis of Logics Walter Carnielli,Marcelo Coniglio,Dov M. Gabbay,Paula Gouveia,Cristina Sernadas,2008-01-22 Starting with simple examples showing the relevance of cutting and pasting logics the monograph develops a mathematical theory of combining and decomposing logics ranging from propositional and first order based logics to higher order based logics as well as to non truth functional logics The theory covers mechanisms for combining semantic structures and deductive systems either of the same or different nature for instance two Hilbert calculi or a Hilbert calculus and a tableau calculus The important issue of preservation of properties is extensively addressed For instance sufficient conditions are provided for a combined logic to be sound and complete when the original component logics are known to be sound and complete The book brings the reader to the front line of current research in the field by showing both recent achievements and directions of future investigations in particular multiple open problems It also provides examples of potential applications in emergent fields like security protocols quantum computing networks and argumentation theory besides discussing more classical applications like software specification knowledge representation computational linguistics and modular automated reasoning This monograph will be of interest to researchers and graduate students in mathematical logic theory of computation and philosophical logic with no previous knowledge of the subject of combining and decomposing logics but with a working knowledge of first order logic The book will also be relevant for people involved in research projects where logic is used as a tool and the need for working with several logics at the same time is mandatory for instance temporal epistemic and probabilistic logics

Intelligent Tutoring Systems Stefano A. Cerri,Guy Gouarderes,Fabio Paragacu,2007-10-23 This book constitutes the refereed proceedings of the 6th International Conference on Intelligent Tutoring Systems ITS 2002 held in Biarritz France and San Sebastian Spain in June 2002 The 93 revised full papers presented together with 5 invited papers and 16 posters were carefully reviewed and selected from 167 full paper submissions The papers address all current issues in

the interdisciplinary field of intelligent tutoring systems The book offers topical sections on agents architectures Web authoring learning dialogue evaluation narrative and motivation and emotions Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2013-08-04 This second edition of the Handbook of Philosophical Logic reflects great changes in the landscape of philosophical logic since the first edition It gives readers an idea of that landscape and its relation to computer science and formal language and artificial intelligence It shows how the increased demand for philosophical logic from computer science and artificial intelligence and computational linguistics accelerated the development of the subject directly and indirectly This development in turn directly pushed research forward stimulated by the needs of applications New logic areas became established and old areas were enriched and expanded At the same time it socially provided employment for generations of logicians residing in computer science linguistics and electrical engineering departments which of course helped keep the logic community to thrive The many contributors to this Handbook are active in these application areas and are among the most famous leading figures of applied philosophical logic of our times
