Science SOL 4.2- Plants & Animals

Deliverable: "Students will explain how different processes and structures help plants to carry out photosynthesis and reproduction."

Plants are composed of parts that function together to carry out life processes such as taking in water and nutrients.

Root Systems
 The roots of a plant are the parts that anchor the plant in the soil and absorb water and nutrients. They are also responsible for storing food. The root system is divided into two main parts: the taproot and the fibrous root system.

- Taproots are the main roots that grow from the base of the plant.
- Fibrous roots are a network of roots that grow from the base of the plant.
- Both types of roots absorb water and nutrients from the soil.
- Taproots also store food for the plant.
- Fibrous roots help the plant to stay upright.

Stem/Trunk
 The stem or trunk of a plant is the part that supports the leaves and flowers. It also transports water and nutrients from the roots to the rest of the plant. The stem is divided into two main parts: the primary stem and the secondary stem.

Leaves
 Leaves are the parts of a plant that carry out photosynthesis. They are also responsible for transpiration, the process of losing water vapor from the plant. The leaf is divided into two main parts: the blade and the petiole.

Flowers
 Flowers are the parts of a plant that reproduce. They are also responsible for the production of seeds. The flower is divided into two main parts: the male part (stamen) and the female part (pistil).

Diagram of a Plant: A diagram of a plant showing its main parts: roots, stem, leaves, and flowers. Labels point to each part.

Diagram of a Flower: A diagram of a flower showing its main parts: stamen, pistil, and petals. Labels point to each part.

Photosynthesis: The process by which plants use sunlight, water, and carbon dioxide to produce glucose and oxygen. The equation is: $6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$.

Transpiration: The process by which plants lose water vapor from their leaves. It is driven by the sun's energy and the wind.

Reproduction: The process by which plants produce new offspring. This can happen in two ways: asexually (without the need for a mate) or sexually (with the need for a mate).

Diagram of a Seed: A diagram of a seed showing its main parts: the embryo, the endosperm, and the seed coat. Labels point to each part.
