How do biogas solutions influence the sustainability of bio-based industrial systems? Linda Hagman, 2018-11-26 Biomass is a valuable and limited resource that should be used efficiently The potential of replacing fossil based products with bio based ones produced in biobased industrial systems is huge One important aim of increasing the share of biobased products is to improve the sustainability of systems for production and consumption Therefore it is important to evaluate what solutions are available to improve the sustainability performance of bio based industrial systems and if they also bring negative impacts The thesis focuses on assessing the role of biogas solutions in developing sustainable bio based systems Such assessments are often quite narrow in their scope and focus on quantitative environmental or economic aspects This thesis aims at also including feasibility related aspects involving the contextual conditions that are assessed more qualitatively Biogas solutions are identified as a versatile approach to treat organic materials which are generated in large volumes in bio based industrial systems The results show that biogas solutions in bio based industrial systems i improve circular flows of energy and nutrients ii are especially viable alternatives when the quality of the by product streams become poorer and iii may improve the profitability of the bio based industrial system To perform better assessments of these systems it seems valuable to broaden the set of indicators assessed and include feasibility related indicators preferably through the involvement of relevant stakeholders as they contribute with different perspectives and can identify aspects that influence the sustainability in different areas Future studies could benefit from applying those broader assessments on more cases to build on a more generalisable knowledge base

Sustainable Energy for All David Ockwell, Rob Byrne, 2016-08-19. Despite decades of effort and billions of dollars spent, two thirds of people in sub-Saharan Africa still lack access to electricity, a vital precursor to economic development and poverty reduction. Ambitious international policy commitments seek to address this, but scholarship has failed to keep pace with policy ambitions, lacking both the empirical basis and the theoretical perspective to inform such transformative policy aims. Sustainable Energy for All aims to fill this gap. Through detailed historical analysis of the Kenyan solar PV market, the book demonstrates the value of a new theoretical perspective based on Socio-Technical Innovation System Building. Importantly, the book goes beyond a purely academic critique to detail exactly how a Socio-Technical Innovation System Building approach might be operationalized in practice, facilitating both a detailed plan for future comparative research as well as a clear agenda for policy and practice.
