Cleaning Fuel Filter

1. Remove the retaining ring (2) from the top of the filter cap (3) and take off the filter cap with filter element (1).
2. Remove any dust or water in the filter cap. Rinse the element with new fuel. Take much care when handling the element because it is very fragile.

■ NOTE

- If the element should have holes, replace it with a new one. A damaged element will reduce the service life of the nozzle and injection pump.

Checking Generator V-belt

1. Adjust the belt by moving the position of the generator forward or backward. The belt should be mounted so that the tension has approximately 0.4 in. (10 mm) of deflection at the middle (between the two pulleys) when pressed by hand. The movement adjustment of the generator is done by using the tension bolt.

**CAUTION**

- Never fail to stop the engine to check and adjust the water pump belt and V-belt.

Checking Link-belt

1. Press the Link-belt between Engine pulley and water pump pulley at force of 6.6 lbs and see the belt deflection is within the factory specifications. (See page 5-53)

**CAUTION**

- Too much belt deflection may cause over heat of engine. Check if the tension of belt is correct in each period (hour) by following method.

Cleaning Oil Filter (Strainer Type) (GL-3500 GL-4500-S)

1. Wash the oil filter and cylinder block interior with fuel oil.
2. If the oil filter is deformed or broken, replace it.

River Flow 2020 Wim Uijttewaall, Mário J. Franca, Daniel Valero, Victor Chavarrias, Clàudia Ylla Arbós, Ralph Schielen, Alessandra Crosato, 2020-08-27 Rivers form one of the lifelines in our society by providing essential services such as availability of fresh water navigation energy ecosystem services and flood conveyance Because of this essential role mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts This has resulted in often highly engineered rivers with a narrow set of functions In the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes River research and engineering has therefore added to the river fundamentals also themes like ecohydraulics consequences of climate change and urbanisation River Flow 2020 contains the

contributions presented at the 10th conference on Fluvial Hydraulics River Flow 2020 organised under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR. What should have been a lively physical gathering of researchers, students and practitioners was converted into an online event as the COVID 19 pandemic hindered international travelling and large gatherings of people. Nevertheless, the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event. Since its first edition in 2002 in Louvain la Neuve, this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals. This is highlighted by the large number of contributions applying for the Coleman award for young researchers and also by the number of applications and attendants to the Master Classes which are aimed at young researchers and students. River Flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics and contains five major themes which are focus of research in the fluvial environment: river fundamentals, the digital river, the healthy river, extreme events and rivers under pressure. Other highlights of River Flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest. The contributions will therefore be of interest to academics in hydraulics, hydrology and environmental engineering as well as practitioners that would like to be updated about the newest findings and hot themes in river research and engineering.

Salinity and Drainage in San Joaquin Valley, California Andrew C. Chang, Deborah Brawer Silva, 2013-11-19. This book documents the history of irrigated agriculture and drainage in the San Joaquin Valley and describes the hydrology and biogeochemical processes of salts and selenium remediation technologies for salts and trace elements and policy and management options. The contents are comprised of fourteen chapter length independent treatises each depicting with fresh perspective a distinctive salinity drainage topic. The opening chapters detail the evolution of irrigated agriculture and depict the geochemical and hydrological processes that define the San Joaquin Valley including the physics, chemistry and biology attributes that impact water management policies and strategies. Next, the contributors address the biogeochemistry of selenium, the role of plants in absorbing it from soils and the processes involved in retaining and concentrating dissolved salts in drainage water. Further chapters describe on-farm and plot-level irrigation provisions to reduce agricultural drainage outputs and examine their effects on plant performance. This volume offers realistic policy analysis of water management options for irrigated agriculture in the Valley and assesses their respective outcomes if implemented. Also included is an international perspective on the sustainability of irrigated agriculture there.

 Heart* Ellen A. Dornelas, 2012-02-01 Cardiovascular disease is a leading cause of death throughout the world Chronic
 negative emotions such as depression and anxiety place cardiac patients at greater risk for death and recurrence of
 cardiovascular disease In 2008 the editor published a book related to this topic titled Psychotherapy with Cardiac Patients
 Behavioral Cardiology in Practice American Psychological Association Aside from that book there are very few resources
 specifically written for clinicians who treat psychologically distressed cardiac patients Unlike other medical specialty areas
 such as oncology the field of cardiology has been slow to integrate behavioral treatments into the delivery of service Perhaps
 because the field has been largely defined and dominated by researchers mental health clinicians are only starting to
 recognize behavioral cardiology as a viable arena in which to practice There is a large void in the practitioner literature on
 behavioral cardiology In a review of Psychotherapy with Cardiac Patients Paul Efthim Ph D wrote Her new book goes well
 beyond previous works by giving specific and detailed guidance about how to tailor psychological interventions with this
 variegated population He added It would benefit from even more details about treatment approaches This proposed volume
 goes beyond the editor s previous volume by providing in depth descriptions of behavioral treatments for distressed cardiac
 patients written by eminent leaders in behavioral cardiology This book describes a wide range of behavioral treatments for
 the common psychologically based problems encountered by clinicians who treat cardiac patients The book is organized as
 follows Part I focuses on the most psychologically challenging and common presentations of cardiac diagnosis coronary

artery disease arrhythmia and heart failure This section also includes a chapter on heart transplantation which is a treatment not a diagnosis but a treatment that incurs profound psychological impact for the individual In Part II behavioral interventions for the general cardiac population are described Mainstream therapies such as stress management cognitive behavioral therapy and medical family therapy are described along with approaches that have less empirical support but considerable practical significance such as personality guided therapy and interventions aimed at altering type D personality traits The literature in behavioral cardiology has a rich history of investigating maladaptive personality traits and thus it is important to include behavioral approaches that target personality in this volume Part III focuses on common behavioral problems encountered by clinicians who work with this patient population Most patients who seek psychological help do so because they perceive themselves to be stressed due to their job or overextended in all areas of their life Other people with heart disease present with sleep problems and or an inability to motivate themselves to exercise or quit smoking There are many practical behavioral approaches that can be helpful for patients with these difficulties and these are detailed in this section of the book The conclusion of the book focuses on how to integrate the behavioral treatments described in the preceding chapters into a comprehensive treatment model Frontiers in Integrative Neuroscience Editor's Pick 2021 Elizabeth B.
