Behavioral Sciences Miriam Schapiro Grosof, Hyman Sardy, 2014-05-10 A Research Primer for the Social and Behavioral Sciences provides an introductory but comprehensive overview of the research process that primarily concerns human subjects. This book discusses the methods of acquiring knowledge, importance of a well-chosen problem, review of the literature, and relationship between theory building and hypothesis testing. The common sources of invalidity in practice, non-experimental research types, Stevens classification of scales, and estimation based on probabilistic sampling are also elaborated. This text likewise covers the role of computer in research techniques for analysis of data, univariate and bivariate statistics, and assumptions underlying analysis of variance. Other topics include the canonical correlation analysis, non-parametric analysis of variance, deterministic problem analysis techniques, and common errors in presentation of findings. This publication is intended for novice investigators in the broad category of social and behavioral sciences. Managing Workspace Changes Natalie Breutner, 2024-12-11 Managing innovative workspace concepts as an organizational change initiative has gained attention among practitioners and researchers. Despite the tremendous potential, workspace concepts might bring to organizations, managing workspace changes is a complex undertaking that requires the consideration of various factors. Many workspace change projects fail and encounter resistance from those affected, often because such projects are not sufficiently based on organizational development and change management knowledge and principles. This book addresses this issue by exploring the process of managing workspace changes along four explorative studies. Building upon a systematic literature review and a longitudinal in-depth case study inside the insurance industry, the conceptual basis, key principles, change activities, and sensemaking patterns are identified. These findings are summarized and integrated into a holistic and scientifically developed process model that shows how workspace changes can be dynamically managed to facilitate organizational change. In doing so, theoretical contributions are derived and valuable recommendations for practitioners in facility management, human resources, and change management are provided. **Managing Your Research Data and Documentation** Kathy R. Berenson, 2018 Choice Reviews Outstanding Academic Title In the behavioral sciences today, there is increasing emphasis on transparency and the need for research studies to be made replicable. This book presents a straightforward approach to managing and documenting one's data so that other researchers can repeat the study. While data management may seem intimidating to new researchers, this book shows how easy it can and should be. The first chapter presents a basic structure of folders and subfolders for organizing data files, and then each subsequent chapter delves into details for a specific folder. Step by step, readers learn to label and archive different kinds of project documents and data files, including original, processed, and working data. Readers also learn to write command codes showing exactly how the original data are analyzed. Examples illustrate how to document the most common types of research: an online survey, a paper questionnaire, and a multiple trial experiment. Since major research funders now require recipients to meet strict standards for data handling, this book will foster a vital career skill for students and promote transparency and replicability of
