La Selva Lucinda A. McDade, 1994-03-18 Abiotic environment and ecosystem processes The plant community Composition dynamics and life history processes The animal community Plant animal interactions La selva s human environment , **A Caribbean Forest Tapestry** Nicholas Brokaw, Todd Crowl, Ariel Lugo, William McDowell, Frederick Scatena, Robert Waide, Michael Willig, 2012-06-21 Global change threatens ecosystems worldwide and tropical systems with their high diversity and rapid development are of special concern We can mitigate the impacts of change if we understand how tropical ecosystems respond to disturbance For tropical forests and streams in Puerto Rico this book describes the impacts of and recovery from hurricanes landslides floods droughts and human disturbances in the Luquillo Mountains of Puerto Rico These ecosystems recover quickly after natural disturbances having been shaped over thousands of years by such events Human disturbance however has longer lasting impacts Chapters are by authors with many years of experience in Puerto Rico and other tropical areas and cover the history of research in these mountains a framework for understanding disturbance and response the environmental setting the disturbance regime response to disturbance biotic mechanisms of response management implications and future directions The text provides a strong perspective on tropical ecosystem dynamics over multiple scales of time and space **Forest Canopies** Margaret D. Lowman, H. Bruce Rinker, 2004-09-28 The treetops of the world s forests are where discovery and opportunity abound however they have been relatively inaccessible until recently This book represents an authoritative synthesis of data anecdotes case studies observations and recommendations from researchers and educators who have risked life and limb in their advocacy of the High Frontier With innovative rope techniques cranes walkways dirigibles and towers they finally gained access to the rich biodiversity that lives far above the forest floor and the emerging science of canopy ecology In this new edition of Forest Canopies nearly 60 scientists and educators from around the world look at the biodiversity ecology evolution and conservation of forest canopy ecosystems Comprehensive literature list State of the art results and data sets from current field work Foremost scientists in the field of canopy ecology Expanded collaboration of researchers and international projects User friendly format with sidebars and case studies Keywords and outlines for each chapter Arthropod Diversity and Conservation David L. Hawksworth, Alan T. Bull, 2007-01-25 Despite their enormous bulk and complexity of architecture plants make up only around a quarter of a million of the 8 million or so species on Earth The major components of biodiversity instead are the smaller largely unseen silent majority of invertebrates most of which are arthropods Vertebrates a mere blip on the biotic horizon are elevated in importance in the bigger scheme of things only by the human psyche This collection of more than 30 peer reviewed papers focuses on the diversity and conservation of arthropods whose species inhabit virtually every recess and plane and feature somewhere in virtually every food web on the planet Highlighting issues ranging from large scale disturbance to local management and from spatial heterogeneity to temporal patterns these papers reflect some of the most

exciting new research taking place today and in some of the most biodiverse corners of the planet **Seed Fate** J. E. Lambert, P. E. Hulme, S. B. Vander Wall, 2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountain and arid deserts in the temperate zone to savanna and lowland rainforests in tropical regions of the world Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging Contributors include leading scientists involved in research on seed ecology and on animal plant relationships from the perspective of both primary and secondary seed dispersal and predation *The New Neotropical Companion* John C. Kricher, 2017-02-21 The acclaimed guide to the ecology and natural history of the American tropics now fully updated and expanded The New Neotropical Companion is the completely revised and expanded edition of a book that has helped thousands of people to understand the complex ecology and natural history of the most species rich area on Earth the American tropics Featuring stunning color photos throughout it is a sweeping and cutting edge account of tropical ecology that includes not only tropical rain forests but also other ecosystems such as cloud forests rivers savannas and mountains This is the only guide to the American tropics that is all inclusive encompassing the entire region s ecology and the amazing relationships among species rather than focusing just on species identification The New Neotropical Companion is a book unlike any other Here you will learn how to recognize distinctive ecological patterns of rain forests and other habitats and to interpret how these remarkable ecosystems function everything is explained in clear and engaging prose free of jargon You will also be introduced to the region s astonishing plant and animal life Informative and entertaining The New Neotropical Companion is a pleasurable escape for armchair naturalists and visitors to the American tropics will want to refer to this book before during and after their trip Covers all of tropical America Describes the species and habitats most likely to be observed by visitors Includes every major ecosystem from lowland rain forests to the high Andes Features a wealth of color photos of habitats plants and animals **Tropical Forests of the Guiana Shield** D. S. Hammond, 2005 The Guiana Shield is an ancient geological formation located in the northern part of South America covering an area of one million square kilometres Despite its hostile environment it is home to many unusual and highly specialized plants and animals which constitute a rich area of biodiversity Chapters in this book include hydrology nutrient cycling forest phenology insect plant interactions forest microclimate plant distributions forest dynamics and conservation and management of flora and fauna It provides a comprehensive and detailed review of the ecology biology and natural history of the forests of the area **A Magic Web** , 2016-03-08 The tropical forest of Panama s Barro Colorado Island is a luxuriant community of plants and animals pulsating with life and offering an astonishing view of nature s myriad processes What does the forest look like How do the activities of the forest s plants and animals create a community In A Magic Web photographer Christian Ziegler and evolutionary biologist Egbert Giles Leigh Jr invite readers to enter the marvelous world of Barro Colorado Island This book is

a unique combination of spectacular photography and clear authoritative text written by an active scientist who has spent half a lifetime trying to understand the tropical forest Luscious photographs of the forest reveal the wonderful diversity of its inhabitants and show many of the activities that give it its character and lend structure to its community Drawing on decades of work on Barro Colorado Island Egbert Leigh explains how the forest works how plants and animals compete with but also depend on each other how the solitary lives of cats contrast with the intricately organized lives of armies of ants the variety of ways plants struggle for a place in the sun and how these plants attract animals to pollenate their flowers Finally the book shows the importance of tropical forests to the people living near them why they matter to the world at large what we can learn from them and how they differ from temperate zone forests Full of stunning full color photographs accompanied by clear and accessible text *A Magic Web* is a must for anyone planning to visit a tropical forest and for all those who wish they could

Tropical Forest Plant Ecophysiology Stephen S. Mulkey, Robin L. Chazdon, Alan P. Smith, 2012-12-06 Taking readers out of the laboratory and into the humid tropical forests this comprehensive volume explores the most recent advances occurring in tropical plant ecophysiology Drawing on the knowledge of leading practitioners in the field this book synthesizes a broad range of information on the ways in which tropical plants adapt to their environment and demonstrate unique physiological processes This book is arranged into four sections which cover resource acquisition species interactions ecophysiological patterns within and among tropical forest communities and the ecophysiology of forest regeneration These sections describe plant function in relation to ecology across a wide spectrum of tropical forest species and growth forms How do different species harvest and utilize resources from heterogeneous tropical environments How do patterns of functional diversity reflect the overwhelming taxonomic and morphological diversity of tropical forest plants Such fundamental questions are examined in rich detail To illuminate the discussions further every chapter in this book features an agenda for future research extensive cross referencing timely references and the integration of ecophysiology and the demography of tropical species where the data exist *Tropical Forest Plant Ecophysiology* provides plant scientists botanists researchers and graduate students with important insights into the behavior of tropical plants Biologists and foresters interested in tropical ecology and plant physiological ecologists will also benefit from this authoritative and timely resource

Multitrophic Level Interactions Teja Tscharntke, Bradford A. Hawkins, 2002-03-21 The multitrophic level approach to ecology addresses the complexity of food webs much more realistically than the traditional focus on simple systems and interactions Only in the last few decades have ecologists become interested in the nature of more complex systems including tritrophic interactions between plants herbivores and natural enemies Plants may directly influence the behaviour of their herbivores natural enemies ecological interactions between two species are often indirectly mediated by a third species landscape structure directly affects local tritrophic interactions and below ground food webs are vital to above ground organisms The relative importance of top down effects control by predators and bottom up effects control by resources must

also be determined These interactions are explored in this exciting volume by expert researchers from a variety of ecological fields This book provides a much needed synthesis of multitrophic level interactions and serves as a guide for future research for ecologists of all descriptions

Costa Rican Ecosystems Maarten Kappelle, 2016-04-15 In the more than thirty years since the publication of Daniel H Janzen s classic Costa Rican Natural History research in this small but astonishingly biodiverse well preserved and well studied Latin American nation has evolved from a species level approach to the study of entire ecosystems And from the lowland dry forests of Guanacaste to the montane cloud forests of Monteverde from the seasonal forests of the Central Valley to the coastal species assemblages of Tortuguero Costa Rica has proven to be as richly diverse in ecosystems as it is in species In Costa Rican Ecosystems Maarten Kappelle brings together a collection of the world s foremost experts on Costa Rican ecology outstanding scientists such as Daniel H Janzen Jorge Cort s Jorge A Jim nez Sally P Horn Robert O Lawton Qu rico Jim nez M Carlos Manuel Rodr guez Catherine M Pringle and Eduardo Carrillo J among others to offer the first comprehensive account of the diversity structure function uses and conservation of Costa Rica s ecosystems Featuring a foreword and introductory remarks by two renowned leaders in biodiversity science and ecological conservation Thomas E Lovejoy and Rodrigo G mez Lobo in addition to chapters highlighting the geology soils and climate of Costa Rica as well as the ecosystems of its terrestrial freshwater and marine habitats and including previously unpublished information on Isla del Coco this beautiful color illustrated book will be an essential reference for academic scientists students natural history guides conservationists educators park guards and visitors alike

Ecosystems of Disturbed Ground L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth s resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation

Phenological Research Irene L. Hudson, Marie R.

Keatley,2009-11-24 As climate change continues to dominate the international environmental agenda phenology the study of the timing of recurring biological events has received increasing research attention leading to an emerging consensus that phenology can be viewed as an early warning system for climate change impact A multidisciplinary science involving many branches of ecology geography and remote sensing phenology to date has lacked a coherent methodological text This new synthesis including contributions from many of the world s leading phenologists therefore fills a critical gap in the current biological literature Providing critiques of current methods as well as detailing novel and emerging methodologies the book with its extensive suite of references provides readers with an understanding of both the theoretical basis and the potential applications required to adopt and adapt new analytical and design methods An invaluable source book for researchers and students in ecology and climate change science the book also provides a useful reference for practitioners in a range of sectors including human health fisheries forestry agriculture and natural resource management *Autoecology and*

Ecophysiology of Woody Shrubs and Trees Ratikanta Maiti,Humberto Gonzalez Rodriguez,Natalya Sergeevna Ivanova,2016-04-07 Forest trees and shrubs play vital ecological roles reducing the carbon load from the atmosphere by using carbon dioxide in photosynthesis and by the storage of carbon in biomass and wood as a source of energy Autoecology deals with all aspects of woody plants the dynamism of populations physiological traits of trees light requirements life history patterns and physiological and morphological characters Ecophysiology is defined by various plant growth parameters such as leaf traits xylem water potential plant height basal diameter and crown architecture which are in turn influenced by physiological traits and environmental conditions in the forest ecosystem In short this book details research advances in various aspects of woody plants to help forest scientists and foresters manage and protect forest trees and plan their future research Autoecology and Ecophysiology of Woody Shrubs and Trees is intended to be a guide for students of woody plant autoecology and ecophysiology as well as for researchers in this field It is also an invaluable resource for foresters to assist in effective management of forest resources **The Earth Dwellers** Erich Hoyt,1997-03-21 The author alternates stories of individual ants with the research of two field biologists in Costa Rica

Schwartz,2013-07-30 Phenology refers to recurring plant and animal life cycle stages such as leafing and flowering maturation of agricultural plants emergence of insects and migration of birds It is also the study of these recurring events especially their timing and relationships with weather and climate Phenological phenomena all give a ready measure of the environment as viewed by the associated organism and are thus ideal indicators of the impact of local and global changes in weather and climate on the earth s biosphere Assessing our changing world is a complex task that requires close cooperation from experts in biology climatology ecology geography oceanography remote sensing and other areas Like its predecessor this second edition of Phenology is a synthesis of current phenological knowledge designed as a primer on the field for global change and general scientists students and interested members of the public With updated and new

contributions from over fifty phenological experts covering data collection current research methods and applications it demonstrates the accomplishments progress over the last decade and future potential of phenology as an integrative environmental science

Ryel, Wolfram Beyschlag, Bert Hölldobler, 2013-04-18 Plant animal interactions have become a focus of ecological research with the processes of herbivory being of special interest This volume examines the interactions of leaf cutting ants with the rainforest vegetation on Barro Colorado Islands in Central America It is the synthesis of field research on multiple scales extending over a period of several years This work can serve as a model study summarizing and extending knowledge about herbivorous insect plant relationships and the resulting consequences on structural and functional features of tropical ecosystems The text is an invaluable reference for researchers and land managers working in the fields of plant animal interactions herbivory community ecology and biodiversity

Phenology: An Integrative Environmental Science Mark Schwartz, 2003-10-31 Phenology is the study of plant and animal life cycle events which are triggered by environmental changes especially temperature Wide ranges of phenomena are included from first openings of leaf and flower buds to insect hatchings and return of birds Each one gives a ready measure of the environment as viewed by the associated organism Thus phenological events are ideal indicators of the impact of local and global changes in weather and climate on the earth s biosphere Assessing our changing world is a complex task that requires close cooperation from experts in biology climatology ecology geography oceanography remote sensing and other areas This book is a synthesis of current phenological knowledge designed as a primer on the field for global change and general scientists students and interested members of the public With contributions from a diverse group of over fifty phenological experts covering data collection current research methods and applications it demonstrates the accomplishments and potential of phenology as an integrative environmental science

Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests Margaret Kalacska, G. Arturo Sanchez-Azofeifa, 2008-02-26 While frequently used in temperate environments hyperspectral sensors and data are still a novelty in the tropics Exploring the potential of hyperspectral remote sensing for assessing ecosystem characteristics Hyperspectral Remote Sensing of Tropical and Sub Tropical Forests focuses on the complex and unique set of challenges involved in using t
