

The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Superior planets or Earth's orbiters always move in the same direction with the Sun behind us or ahead, but for Mars in the perspective, as it orbits the Sun faster than Earth, it appears to move backwards. This is not the case with inferior planets as they are always between Earth and the Sun.

4) Explain why we see Mars and not some of the Jovian planets for the retrograde.

The Jovian planets are much further away and their orbits take longer, so the retrogrades would be harder to readily see.
