Evidence of Evolution

BACKGROUND

Much evidence has been found to indicate that living things have evolved or changed gradually during their natural history. The study of fossils as well as work in embryology, biochemistry, and comparative anatomy provide evidence for evolution.

OBJECTIVE

In this lab you will learn about homologous, analogous and vestigial structures and their significance in evolution theory.

MATERIALS

colored pencils

PROCEDURES AND OBSERVATIONS

Part I. Homologous Structures.

- a. Carefully examine the drawings of the bones shown in Figure 1. Note similar positions of like bones.

1. Color each bone of the human arm a different color. (All bones of the wrist should be a

single color, the bone groups of the hand should be a different single color.) Then color the similar bone in each of the other animals the same color as the human bone.

approximately 69 billion neurons that is 80% of the nerve cells in the brain The cerebellum first arose in jawed vertebrates such as sharks and early vertebrates also have an additional cerebellum like structure in the hindbrain Shark cerebellum like structures function as adaptive filters to discriminate self from other in sensory inputs It is likely that the true cerebellum evolved from these cerebellum like precursors and that their adaptive filter functionality was adopted for motor control paving the way for the athleticism and movement finesse that we see in swimming running climbing and flying vertebrates This book uses an evolutionary perspective to open up the exciting body of work that is cerebellar research to a wide audience Understanding the brain is of interest to many people from many different backgrounds and for many different reasons Therefore understanding cerebellum is a significant step towards the wider challenge of understanding the brain This book will be of interest to neuroscientists neurologists and psychologists in addition to computer scientists and engineers concerned with machine human interactions and robotics *Laboratory Manual Inquiry into Life* Sylvia S. EMRS PGT Biology Test Papers (15) , EMRS PGT Biology teachers Test Papers 15 **Teaching about Scientific Origins** Leslie Sandra Jones, Michael Jonathan Reiss, 2007 Persistent resistance to the teaching of evolution has so drastically impacted science curricula that many students finish school without a basic understanding of a theory that is a fundamental component of scientific literacy This evolution creationism controversy has crippled biological education in the United States and has begun to spread to other parts of the world This book takes an educational point of view that respects both the teaching of evolution and religious beliefs Authors from different academic traditions contribute to a collection of perspectives that begin to dismantle the notion that religion and science are necessarily incompatible

Experimental Evolution Theodore Garland, Michael R. Rose, 2009-12-03 Experimental approaches to evolution provide indisputable evidence of evolution by

directly observing the process at work Experimental evolution deliberately duplicates evolutionary processes forcing life histories to evolve producing adaptations to stressful environmental conditions and generating lineage splitting to create incipient species This unique volume summarizes studies in experimental evolution outlining current techniques and applications and presenting the field s full range of research from selection in the laboratory to the manipulation of populations in the wild It provides work on such key biological problems as the evolution of Darwinian fitness sexual reproduction life history athletic performance and learning

Wild Immunology—The Answers Are Out There Gregory M. Woods,Andrew S. Flies,2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and

pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species
