Cellular System Definition

In a cellular system, the covering area of an operator is divided into cells. A cell corresponds to the covering area of one transmitter or a small collection of transmitters. The size of a cell is determined by the transmitter's power.

The concept of cellular systems is the use of low power transmitters in order to enable the efficient reuse of the frequencies. In fact, if the transmitters used are very powerful, the frequencies cannot be reused for hundreds of kilometers as they are limited to the covering area of the transmitter.

The Cell

- Cellular Radio involves dividing a large service area into regions called "cells."
- Each cell has the equipment to switch, transmit and receive calls.
- Cells - Reduce the need of High powered transmission
- Cells - Conventionally regarded as being hexagonal, but in reality they are irregularly shaped.
