**Lab Manual for General, Organic, and Biochemistry** Denise Guinn, Rebecca Brewer, 2009-08-21 Teaching all of the necessary concepts within the constraints of a one term chemistry course can be challenging. Authors Denise Guinn and Rebecca Brewer have drawn on their 14 years of experience with the one term course to write a textbook that incorporates biochemistry and organic chemistry throughout each chapter, emphasizes cases related to allied health, and provides students with the practical quantitative skills they will need in their professional lives. *Essentials of General Organic and Biochemistry* captures student interest from day one with a focus on attention getting applications relevant to health care professionals and as much pertinent chemistry as is reasonably possible in a one term course. Students value their experience with chemistry, getting a true sense of just how relevant it is to their chosen profession. **Criminalistics Laboratory Manual** Elizabeth Erickson, 2012-12-31 *Criminalistics Laboratory Manual* provides students who have little to no prior knowledge of forensic science with a practical crime scene processing experience. The manual starts with an original crime scene narrative setting up the crime students are to solve. This narrative is picked up in each of the 17 forensic science lab activities, tying all forensic disciplines together to show the integrated workings of a real crime lab. The lab activities cover fingerprints, blood typing, and spatter analysis, hair and fiber, digital forensics, and more. After completing all of the exercises, the student will be able to solve the homicide based on forensic evidence. Each chapter also includes an introduction to the type of forensic evidence covered and practice exercises and key definitions to prepare students for the laboratory exercise. While fitting in with the larger crime scene narrative, the individual chapters are written so that they can be used separately, giving instructors flexibility. Original crime scene scenario engages students, drawing them into the forensic scientific process. Practical hands-on crime scene processing activities with clear, detailed instructions for how to perform each laboratory exercise. Laboratory objectives, key terms, review questions, and glossary of terms keep the student focused on what's important. No forensic science lab required. Alternative materials and equipment are suggested if a science lab is not available.
