Bio 111/210/260

OBJECTIVES

After completion of this experiment, the student Will be able to:

1. Define the following terms, phenotype, genotype, genetic cross, parental generation, first generation, second generation
2. Demonstrate the following skills necessary for genetic problems solving. determining the genotypes using the proper symbols, determining the gametes, produced by the parents in a given cross and determining the genotypes and phenotypes of the children in the next generation
3. Be able to solve problems of complete and incomplete dominance involving monohybrid crosses.
4. Understand the Principle of Independent Assortment.
5. Explain how sex is determined in mammals.
6. Solve problems involving sex-linked genes.

INTRODUCTION

In sexually reproducing organisms, genetic information is passed from parents to offspring by means of haploid gametes (eggs and sperm) which unite to form a diploid zygote. The zygote receives half of its chromosomes from its father and from its mother. The genotype of the offspring is determined by the type of alleles the parents pass on them, in turn, the alleles present in the offspring will influence the observable traits in the new individuals, given rise to their specific phenotypes.
