*Enhanced* Carlton N. Brock III, 2011-09-20 The world is a dangerous place It has been taken over by one man an immortal and immoral man named Magini Tirocher the self proclaimed king of the world The human population has been infected with a deadly virus and chaos reigns The only ones spared the ravages of this apocalypse are those known as the Enhanced genetically created super beings designed for war Rex can turn into a dinosaur Dimitria can read minds Remy controls electricity Rio can start fires and Red does whatever he wants But these super soldiers lack one quality their makers demand obedience Now this group of rejected Enhanced soldiers builds up the Red Army one of hundreds of rebellious battle groups who share one goal the end of the reign of the tyrant Magini Surrounded by his crew of murderous bodyguards Magini is set upon the idea of ending the rebellion once and for all by any means necessary And with unlimited power resources and life he considers himself untouchable Those who would destroy him think otherwise In this new world only one thing is certain one side is bound to fail

Stitching the World: Embroidered Maps and Women's Geographical Education Judith A. Tyner, 2016-12-05 From the late eighteenth century until about 1840 schoolgirls in the British Isles and the United States created embroidered map samplers and even silk globes Hundreds of British maps were made and although American examples are more rare they form a significant collection of artefacts Descriptions of these samplers stated that they were designed to teach needlework and geography The focus of this book is not on stitches and techniques used in drafting the maps but rather why they were developed how they diffused from the British Isles to the United States and why they were made for such a brief time The events of the late eighteenth and early nineteenth centuries stimulated an explosion of interest in geography The American and French Revolutions the wars between France and England the War of 1812 Captain Cook's voyages and the explorations of Lewis and Clark made the study of places exciting and important Geography was the first science taught to girls in school This period also coincided with major changes in educational theories and practices especially for girls and this book uses needlework maps and globes to chart a broader discussion of women's geographic education In this light map samplers and embroidered globes represent a transition in women's education from accomplishments in the eighteenth century to challenging geographic education and conventional map drawing in schools and academies of the second half of the nineteenth century There has been little serious study of these maps by cartographers and moreover historians of cartography have largely neglected the role of women in mapping Children's maps have not been studied although they might have much to offer about geographical teaching and perceptions of a period and map samplers have been dismissed because they are the work of schoolgirls Needlework historians likewise have not done in depth studies of map samplers until recently *Stitching the World* is an interdisciplinary work drawing on cartography needlework and material culture This book for the first time provides a critical analysis of these artefacts showing that they offer significant insights into both eighteenth and nineteenth century geographic thought and cartography in the USA and

the UK and into the development of female education      *Geography Skills Activities* Barbara Gregorich,1997 designed to help students master the essentials of map reading and interpretation p vii      **Prentice Hall World Explorer: Eastern Hemisphere** Heidi Hayes Jacobs,Brenda Randolph,Michal LeVasseur,Yvonne S. **Eastern Hemisphere** Kenneth S. Cooper,1993 Countless Sands Jeffrey Moser,Jason Protass,2024-12-31 Countless Sands presents engaging analyses of the diverse relationships between Buddhism and the environment that existed in medieval Asia Recent years have witnessed a surge in publications across the humanities that advance powerful ethical and political arguments to account for the human failure to respond effectively to global climate change While the contributors to this volume are attuned to this challenge rather than present explicit political arguments they pursue a subtler effort to historicize the environment as a site and subject of Buddhist practice while providing research grounded in rigorous analysis of complex and fragmentary sources The volume thereby mitigates against the Orientalist East West binaries that have long informed the invocation of Buddhism in Euro American environmental discourses As the chapters collectively demonstrate there was no singular consistently Buddhist understanding of the natural world but innumerable varied engagements preserved in discrete texts images and artifacts Through specific case studies the authors consider such questions as How did premodern Buddhists understand what we today call the environment How did they think about their earth How when and where did the various processes of the earth actually impinge on the practices of historical Buddhists What kinds of environmental imaginations informed specific Buddhist practices In so doing the authors explore the connections between the ways in which historical Buddhist communities interacted with their environments and how they understood those environments In the broader field of Buddhist studies Countless Sands contributes to ongoing efforts to expand the locus of inquiry from textually based investigations of Buddhist doctrine to a broader examination of the complex and varied place of Buddhism in the lives of historical communities The book furthers this broader process by casting it in environmental terms and will engage readers looking for models of thought provoking historical analysis on environmental themes
