Grasscutter Farming Carl Juan, 2023-12-30 Breeding and raising grasscutters which are big rodents endemic to Africa is known as grasscutter farming grasscutter rearing or just grasscutter farming Thryonomys swinderianus is the correct scientific moniker for the grasscutter Due to their diet of grasses and other plant debris grasscutters are also sometimes referred to as cane rats Grasscutter farming is done mostly for the meat industry as grasscutter meat is prized across much of Africa Because of their high protein and low fat content these animals are highly prized in countries where they are consumed Among the most important facets of grasscutter farming are Cages or enclosures are the standard method of housing for grasscutters since they give security from potential predators and a manageable setting for the animals In terms of nutrition grasscutters are herbivores that thrive on a diet of greens Proper nourishment and access to clean water are vital for their health and growth Grasscutters have a high rate of live birth so a breeding program is a necessary part of any successful grasscutter farming operation Management Good management includes providing for the health and safety of the grasscutters through measures such as sanitation and medical attention Grasscutter livestock and meat are highly sought after in many African markets thus farmers often sell their animals directly to buyers Due to the high demand for grasscutter

meat and the animal s ease of care in captivity grasscutter farming has become more popular in various African countries It presents a chance for low impact family scale livestock husbandry that can boost food security and income in some areas

Voices from the Forest Malcolm Cairns, 2010-09-30 This handbook of locally based agricultural practices brings together the best of science and farmer experimentation vividly illustrating the enormous diversity of shifting cultivation systems as well as the power of human ingenuity Environmentalists have tended to disparage shifting cultivation sometimes called swidden cultivation or slash and burn agriculture as unsustainable due to its supposed role in deforestation and land degradation However a growing body of evidence indicates that such indigenous practices as they have evolved over time can be highly adaptive to land and ecology In contrast scientific agricultural solutions imposed from outside can be far more damaging to the environment Moreover these external solutions often fail to recognize the extent to which an agricultural system supports a way of life along with a society s food needs They do not recognize the degree to which the sustainability of a culture is intimately associated with the sustainability and continuity of its agricultural system Unprecedented in ambition and scope Voices from the Forest focuses on successful agricultural strategies of upland farmers More than 100 scholars from 19 countries including agricultural economists ecologists and anthropologists collaborated in the analysis of different fallow management typologies working in conjunction with hundreds of indigenous farmers of different cultures and a broad range of climates crops and soil conditions By sharing this knowledge and combining it with new scientific and technical advances the authors hope to make indigenous practices and experience more widely accessible and better understood not only by researchers and development practitioners but by other communities of farmers around the world
