The Tree Dispensary explores the history folklore and medicinal uses of native European trees beautifully illustrated with the author's own photographs. The book presents a thorough and deep appreciation of trees as the author has experienced them through everyday life as a herb historian and practising herbalist. Categorised into seasons each of the 30 tree chapters covers cultivation, cooking, foraging, crafts, history, botany, medicinal use, and mythology. Original herbals are used as source material for the historical section, allowing voices from the past to speak for themselves. A Herbalists Reference for each tree includes medicinal uses, dosage, and constituents and reflects the author's own extensive experience of using these wonderful tree remedies. For years as a herbalist I had been walking about looking down for what was growing around my feet. The emphasis changed to looking up and I was delighted by the exquisite detail of tiny female flowers on trees which I simply could not believe I had missed before. I took photographs, pressed herbarium samples, harvested and studied, experimented with barks, catkins, and leaves to produce dyes. Never again will a tincture or dried herb of tree origin be simply a name on a label and a list of constituents, actions, and indications. I hope as you read this book you will also feel a stronger connection and wish to explore plant and care for trees yourselves. Volume 2 of The Tree Dispensary covering exotic trees will be published in Autumn 2021.

Plant Metabolites: Methods, Applications and Prospects Swapna Thacheril

Sukumaran, Shiburaj Sugathan, Sabu Abdulhameed, 2020-11-28. Food security and the medicinal needs of billions of people around the world are pressing global issues and the biodiversity and sustainable utilization of plants is of great significance in this context. Further ethnobotanical studies are vital in the discovery of new drugs from indigenous medicinal plants and plants with industrially important metabolites need to be cultivated to meet the growing market demand. In addition, the production of plant metabolites under in vitro conditions also has tremendous possibilities. The totipotency of plant cells plays a valuable role in the sustainable utilization of plant resources through cell tissue and organ culture. At the same time, production can be enhanced using productive cell lines, treatment with elicitors, changing nutritional parameters, and metabolic engineering. This book provides state-of-the-art information on biodiversity conservation, ethnobotany, various aspects of in vitro secondary metabolite production, bioprospecting from various plant groups, and drug discovery. It also discusses methods of extracting and characterizing drug leads from plant sources.
