Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10 Over the last three decades, the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha, to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could, without exaggeration, be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years, it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations, and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be found in this all-encompassing reference. Instead, Frank Lees' world-renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field, Sam Mannan, is professor of chemical engineering at Texas A&M. Principles, practice, codes, standards, data, and references needed by those practicing in the field.
