

## RUNNING IN

The following precautions should be taken during the running in period :

1. Experience has shown that the first 50 hours of tractor operation have a significant effect on the performance and life of the engine.

From new, the tractor should be engaged in work which will load the engine as near to full conditions as possible. The engine should always be allowed to reach a temperature of 60°C (140°F) before being subjected to full load.

2. It is quite normal for oil consumption to be relatively high during the running in period. During running in therefore, check the engine oil level twice a day during the first 50 hours of operation to avoid the risk of lubrication failure.

3. During the running in period, check frequently the tightness of all screws, bolts, nuts, especially wheel nuts which must be checked daily until torque is held (see chapter 5).

4. Do not forget to make all the checks listed in the tractor service record book supplied with your tractor.

## STARTING

**NOTE :** Before starting the tractor, refer to the maintenance guide on page 4-3.

**DANGER :** Never run the tractor in an enclosed building. Never start the engine unless you are seated on the tractor.

**CAUTION :** Before starting the engine, move the PTO knob to neutral position.

**IMPORTANT :** On starting the tractor for the first time, or after a prolonged period out of service, to ensure lubrication of the turbo-charger bearings run the engine on the starter for about ten seconds, to ensure that the engine will not start, disconnect the electrical stop control of the fuel injection pump (Fig. 1).

**Speedshift tractor:** To have correct lubrication of the transmission, never start the engine with speedshift :

- in High range (30 Km/H gearbox except 6180 )
- in Low range (30 Km/H gearbox only for 6180 )
- in Low range (40 Km/H gearbox).

Starting the engine :

1. Depress the clutch pedal and put the main gear lever in neutral position.
  2. Move the hand throttle lever to the maximum position.
  3. Turn the starter switch key to position 2. All indicators should light. If one bulb has blown, replace it before starting the tractor.
  4. Turn the starter switch key to the "start" position and hold it there until the engine fires, or for a maximum of 30 seconds.
  5. Reduce the engine speed as soon as the engine has started.
- NEVER** run the engine without first leaving it idle for a few minutes.
