Handbook Of Spatial Point Pattern Analysis In Ecology Chapman Hallcrc Applied Environmental Statistics:
Handbook of Spatial Point-Pattern Analysis in Ecology Thorsten Wiegand,Kirk A. Moloney,2013-12-20 This handbook shows how the techniques of point pattern analysis are useful for tackling ecological problems Within an ecological framework it guides readers through a variety of methods for different data types and aids in the interpretation of the results obtained by point pattern analysis Along with the techniques the book provides a comprehensive selection of real world examples Most of the examples are analyzed using the authors software package Programita The software and a manual are available online   **Spatial Linear Models for Environmental Data** Dale L. Zimmerman,Jay M. Ver Hoef,2024-04-17 Many applied researchers equate spatial statistics with prediction or mapping but this book naturally extends linear models which includes regression and ANOVA as pillars of applied statistics to achieve a more comprehensive treatment of the analysis of spatially autocorrelated data Spatial Linear Models for Environmental Data aimed at students and professionals with a master s level training in statistics presents a unique applied and thorough treatment of spatial linear models within a statistics framework Two subfields one called geostatistics and the other called areal or lattice models are extensively covered Zimmerman and Ver Hoef present topics clearly using many examples and simulation studies to illustrate ideas By mimicking their examples and R code readers will be able to fit spatial linear models to their data and draw proper scientific conclusions Topics covered include Exploratory methods for spatial data including outlier detection semi variograms Moran s I and Geary s c Ordinary and generalized least squares regression methods and their application to spatial data Suitable parametric models for the mean and covariance structure of geostatistical and areal data Model fitting including inference methods for explanatory variables and likelihood based methods for covariance parameters Practical use of spatial linear models including prediction kriging spatial sampling and spatial design of experiments for solving real world problems All concepts are introduced in a natural order and illustrated throughout the book using four datasets All analyses tables and figures are completely reproducible using open source R code provided at a GitHub site Exercises are given at the end of each chapter with full solutions provided on an instructor s FTP site supplied by the publisher   Biometry for Forestry and Environmental Data Lauri Mehtätalo,Juha Lappi,2020-05-27 Biometry for Forestry and Environmental Data with Examples in R focuses on statistical methods that are widely applicable in forestry and environmental sciences but it also includes material that is of wider interest Features Describes the theory and applications of selected statistical methods and illustrates their use and basic concepts through examples with forestry and environmental data in R Rigorous but easily accessible presentation of the linear nonlinear generalized linear and multivariate models and their mixed effects counterparts Chapters on tree size tree taper measurement errors and forest experiments are also included Necessary statistical theory about random variables estimation and prediction is included The wide applicability of the linear prediction theory is emphasized The hands on examples with implementations using R make it easier for non statisticians to understand
