This book articulates and interconnects a range of research methods for the investigation of business management processes. It introduces new directions that both recognise the business community as stakeholders in the research process and seek to include them in that process. The book presents a range of contemporary research methods with particular focus on those that allow insights into business managers' thoughts and behaviours. It includes fresh views on traditional research designs for example new approaches to using literature reviews, experiments, interviews, and observation studies. It also considers cutting edge research methods such as the use of vignettes, workshops, improvisation, and theatre, as well as computer based simulation. In addition to discussing new approaches to data capture and data generation, it presents new methods of data analysis by considering various forms of models and modelling, new forms of computer aided text analysis, and innovative approaches to data display. Finally, the book provides a link between the philosophical underpinnings of research and the different research methods presented. This is often neglected but undertaking the knowledge generating journey that is research includes having a view on reality and marrying this to beliefs about how the reality to be investigated can be best expedited.

Computational Intelligence in Telecommunications Networks Witold Pedrycz, Athanasios Vasilakos, 2018-10-03

Telecommunications has evolved and grown at an explosive rate in recent years and will undoubtedly continue to do so. As its functions, applications, and technology grow, it becomes increasingly complex and difficult, if not impossible, to meet the demands of a global network using conventional computing technologies. Computational intelligence (CI) is the technology of the future, and the future is now. Computational Intelligence in Telecommunications Networks offers an in-depth look at the rapid progress of CI technology and shows its importance in solving the crucial problems of future telecommunications networks. It covers a broad range of topics from Call Admission Control, congestion control, and QoS routing for ATM networks to network design and management, optical mobile and active networks, and Intelligent Mobile Agents. Today's telecommunications professionals need a working knowledge of CI to exploit its potential to overcome emerging challenges. The CI community must become acquainted with those challenges to take advantage of the enormous opportunities the telecommunications field offers. This text meets both those needs clearly, concisely, and with a depth certain to inspire further theoretical and practical advances.

Computational Intelligence and Informatics Imre J. Rudas, János

Fodor, 2010-10-08 The International Symposium of Hungarian Researchers on Computational Intelligence and Informatics celebrated its 10th edition in 2009. This volume contains a careful selection of papers that are based on and are extensions of corresponding lectures presented at the jubilee conference. This annual Symposium was launched by Budapest Tech (previously Budapest Polytechnic) and by the Hungarian Fuzzy Association in 2000 with the aim to bring together Hungarian-speaking researchers working on computational intelligence and related topics from all over the world but with special emphasis on the Central European Region. The Symposium of the 10th jubilee anniversary contained 70 reviewed papers. The growing interest and the enthusiasm of the participants have proved that the Symposium has become an internationally recognized scientific event providing a good platform for the annual meeting of Hungarian researchers. The main subject area called Computational Intelligence includes diverse topics. Therefore, we offer snapshots rather than a full coverage of a small particular subject to the interested reader. This principle is also supported by the common national root of the authors. The book begins with Information Systems and Communication. This part contains papers on graphs of grammars, software and hardware solutions for Mojette transformation, statistical intrusion detection, congestion forecast, and 3D-based internet communication and control.
