Literary Twinship from Shakespeare to the Age of Cloning Wieland Schwanebeck, 2020-01-06 Unlike previous efforts that have only addressed literary twinship as a footnote to the doppelganger motif this book makes a case for the complexity of literary twinship across the literary spectrum Shortlisted for the ESSE Book Award 2022 Literatures in the English Language it shows how twins have been instrumental to the formation of comedies of mistaken identity the detective genre and dystopian science fiction The individual chapters trace the development of the category of twinship over time demonstrating how the twin was repeatedly re invented as a cultural and pathological type when other discursive fields constituted themselves and how its literary treatment served as the battleground for ideological disputes by setting the stage for debates regarding kinship and reproduction or by partaking in discussions of criminality eugenic greatness and monstrous births The book addresses nearly 100 primary texts including works of Mary Elizabeth Braddon Wilkie Collins Charles Dickens Arthur Conan Doyle Aldous Huxley Christopher Priest William Shakespeare and Zadie Smith *Interface between Literature and Science* Victoria Carpenter, 2015-05-13 The boundaries of science and literature are permeable they are continuously crossed and illuminated by a variety of narrative forms and their interpretations Changes in our perception of the world are informed in equal measure by scientific and humanistic disciplines This volume treats both literary and scientific texts as products of the human mind therefore abiding by all the rules it creates scientific and humanistic alike The volume does not propose to replace all literary or discourse analysis with a cross disciplinary science based approach but rather uses this theoretical stance when more conventional means fail to explain or even explore the intricacies of a text It argues that scientific discourse can also be analysed through the prism of literary theories since all texts are governed in varying measure by the unity of contexts that characterize their nature the process of their creation and their place in the cognitive realm of humanity This approach will allow the nature and limitations of scientific research to be questioned while opening up more venues to explore scientific creativity that crosses the subject boundaries of science and humanities Latin American literature offers many examples of the interconnection between literary and scientific discourse Notwithstanding the often explored relationship between Jorge Luis Borges's literary themes and contemporary scientific discoveries a more general question should be asked is the influence of scientific thought a privilege of the select few or is it indeed an all pervading experience in Latin American literary narrative from late modernism to present day This book explores the texts that overtly incorporate scientific content or are structured in such a way that immediately reminds the reader of a scientific phenomenon it will also examine the texts that are presented in such a way that a conventional literary analysis does not help penetrate the many narrative layers that the text comprises The volume offers cross disciplinary readings of such authors as Jorge Luis Borges Gabriel Garc a M rquez Ernesto S bato and Gustavo Sainz to name but a few **Rock 'n' Roll** Tom Stoppard, 2007 Rock n Roll spans the years from 1968 to 1990 from the double perspective of Prague where a rock n roll
