J. Hall, 1996 The overall objective of this study was to develop a 3 D numerical analysis for compressor casing treatment flowfields The current version of the computer code resulting from this study is referred to as ADPAC Advanced Ducted Propfan Analysis Codes Version 7 This report is intended to serve as a computer program user s manual for the ADPAC code developed under Tasks 6 and 7 of the NASA Contract The ADPAC program is based on a flexible multiple block grid discretization scheme permitting coupled 2 D 3 D mesh block solutions with application to a wide variety of geometries Aerodynamic calculations are based on a four stage Runge Kutta time marching finite volume solution technique with added numerical dissipation Steady flow predictions are accelerated by a multigrid procedure An iterative implicit algorithm is available for rapid time dependent flow calculations and an advanced two equation turbulence model is incorporated to predict complex turbulent flows The consolidated code generated during this study is capable of executing in either a serial or parallel computing mode from a single source code Numerous examples are given in the form of test cases to demonstrate the utility of this approach for predicting the aerodynamics of modem turbomachinery configurations *A User's Guide to Vacuum Technology* John F.
