Health Systems Thinking James A. Johnson, Douglas E. Anderson, Caren C. Rossow, 2018-10-15 This book is a primer focusing on systems thinking as it spans the domains of health administration, public health, and clinical practice. Currently, the accrediting commissions within public health, health administration, and nursing are including systems thinking as part of the core competencies in their respective fields and professions. Meanwhile, academic programs do not have the materials other than journal articles to give students the requisite understanding of systems thinking as is expected of the next generation of health professionals. This primer is designed to meet that void and serve as a supplemental reading for this important and timely topic. This is the only book of its kind that provides a broad introduction and demonstration of the application of health systems thinking.

Tools, Methodologies and Techniques Applied to Sustainable Supply Chains Jorge Luis García-Alcaraz, 2020-02-21 Supply chains are currently globalized, and companies operate internationally owing to the fact that raw materials production processes and the consumption of the final products are carried out in different countries. This implies high material and information flow, which incurs high costs associated with the supply chain and logistics, sometimes up to 60% of the total cost of the product. Therefore, companies seek to optimize their resources to reduce these costs and improve sustainability in a globalized market. This book, entitled *Tools, Methodologies and Techniques Applied to Sustainable Supply Chains*, contains 15 chapters that report case studies applied to industrial and service sectors. The authors come from areas such as Mexico, Colombia, Italy, Sweden, Slovakia, China, and Australia. They indicate how managers make use of tools and techniques to solve problems associated with supply chains to reduce their cost and remain competitive. A great effort has been made to analyze this problem, and the methodologies are clearly described here to facilitate the reproducibility of each technique and tool. This was done in the hope that, one day, they may be applied in more companies.

Performance Improvement in Hospitals and Health Systems James Langabeer II, 2018-02-12 Healthcare Organizations offer significant opportunities for change and improvement in their overall performance. Hospitals and clinics are generally large, complex, and inefficient and need serious development in process, workflow, and management systems, which will ultimately lead to better patient and financial outcomes. The National Academy of Medicine has stated that hospital systems are broken and that they must begin by improving hospital efficiency and patient flow and using operational management methods and information technologies. In fact, costs and quality are two of the important aspects of the triple aim in healthcare. One area that offers significant potential for improvement is through the application of performance improvement methods to patient and process flows. Performance improvement has a significant impact on a hospital's overall financial and strategic performance. Performance improvement involves the deployment of quantitative and scientific methods to model and influence the functioning of organizations. Performance improvement professionals are tasked with managing a variety of activities such as deploying new information technologies, serving as project managers for construction events, re-engineering departmental process workflow.

Health Administration , Logistics management operationalised in a healthcare context Malin Wiger, 2018-05-14 Healthcare improvements is constantly relevant and an important topic Healthcare is frequently being called upon to be more cost efficient and still fulfil demands regarding waiting times quality and availability Experience from structural changes in other contexts gives reason to be positive about the potential for logistics improvements in the healthcare sector as well From a logistics perspective patients pass different care functions units organisations and health facilities It is assumed that logistics management knowledge applied in healthcare can lead to lower costs shorter waiting times better patient service shorter treatment times and increased capacity This dissertation therefore presents an exploration of how logistics management theories can be operationalised in a healthcare context to understand care chain effectiveness Theoretically the operationalisation is done by systems theory creating compatibility between logistics management theories and the healthcare context As a first step features for a logistics system forms features for achieving care chain effectiveness High care chain effectiveness is thus a desired condition and the care delivery system is the tool to achieve it As the final step in the operationalisation the features for care chain effectiveness are in turn used to analyse today's practices Empirically the research is based on qualitative data from a single case study with multiple units of analysis It includes four care units at one of Sweden's university hospitals where the data is gathered through interviews insight into management systems and document analysis One of the main results is the 21 areas identified for analysing today's practices by means of features for care chain effectiveness Another main result is the four important concepts revealed through the operationalisation Lead time the episode of care from order to delivery as the amount of time for patient cases between first contact with healthcare and the last Patient order fulfilment fulfilment of patients needs broken down into several smaller steps performed over time within different care units in one or several organisations consisting of

five sub processes order handling diagnosis treatment follow up and discharge True demand patients needs that is to be met and thus sets what care to deliver i e the production plan and the subordinate resource plan System boundaries defines which care units to include when focusing on the care delivery system s performance as a whole and should be more important than the performance and productivity of each individual care unit A number of direct suggestions for care chain improvement can also be found in the concluding remarks for example that objectives linked to economic influx or penalty narrow the system and that lead time data on an aggregated level is needed to cover episodes of care The theoretical contribution of the dissertation is to the field of logistics management through the methodological development of using these theories in a new context The managerial contribution is to healthcare managers through providing opportunities to improve care chains primarily by means of a greater understanding of care delivery systems

Engineering the System of Healthcare Delivery William B. Rouse, Denis A. Cortese, 2010 As the United States continues to debate reform of its healthcare system this book argues that providing health insurance for all without improving the delivery system will not improve the current problems of access affordability and quality The US healthcare system has many excellent components strong scientific input extraordinary technology for diagnosis and treatment dedicated staff and top class facilities among them But the system has evolved haphazardly over time and although it has not failed entirely the authors argue that like any system where attention is paid to individual components at the expense of the system as a whole it can never hope to succeed Above all they point out that the US system does not provide high value healthcare it has the highest costs in the world and yet many other countries have lower infant mortality rates and better life expectancy Together with a team of highly regarded thought leaders the authors of this publication advocate a complete re thinking of healthcare from a systems perspective an engineering approach to healthcare and they then describe how to set about it Covering a wide range of subjects including health care costs and economics barriers to change integrated health systems electronic records and computer based patient support as well as patient safety and palliative and chronic care this book will be of interest to all those involved in healthcare provision whose goal is affordable care to promote healthy high quality lives
