*Integrating Science and Politics for Public Health* Patrick Fafard, Adèle Cassola, Evelyne de Leeuw, 2022-05-30 This open access book bridges the divide between political science and public health whilst simultaneously embracing the complexities and differences of both. Although public health is inherently political, the tools and insights of political science are often ignored in public health scholarship. Bringing together academics and researchers working at the intersection of both, the book demonstrates how integrating these fields can help reconcile the roles of politics and scientific evidence in policymaking. It also highlights the key conceptual, methodological, and substantive implications for bridging this divide and charts a path forward for a movement towards political science with public health. It will be of interest to academics, researchers, and students interested in public health, political science, public policy, and the role of scientific evidence in policymaking.

**Managing Projects in Health and Social Care** Vivien Martin, 2005-06-29 *Managing Projects in Health and Social Care* is designed for anyone who is asked to manage a public services project but who lacks the experience or training to feel confident in this role. The book shows how to use project management techniques to ensure that your project will be successful. The key dimensions discussed are budget, time, feasibility, planning, scheduling, implementation, and evaluation. The book includes many examples to show how people have used the techniques described in health and care settings. There are clear explanations of how and when to use each technique and consideration of the differences between large and complex projects and smaller, less complicated ones. It is a valuable resource for anyone who wants to be sure that their project will make a useful contribution to the improvement of health and care services.

**Risk Evaluation and Management** V.T. Covello, Joshua Menkes, J.L. Mumpower, 2012-12-06 Public attention has focused in recent years on an array of technological risks to health, safety, and the environment. At the same time, responsibilities for technological risk assessment, evaluation, and management have grown in both the public and private sectors because of a perceived need to anticipate, prevent, or reduce the risks inherent in modern society. In attempting to meet these responsibilities, legislative, judicial, regulatory, and private sector institutions have had to deal with the extraordinarily complex problems of assessing and balancing risks, costs, and benefits. The need to help society cope with technological risks has given rise to a new intellectual endeavor: the social and behavioral study of issues in risk evaluation and risk management. The scope and complexity of these analyses require a high degree of cooperative effort on the part of specialists from many fields. Analyzing social and behavioral issues requires the efforts of political scientists, sociologists, decision analysts, management scientists, economists, psychologists, philosophers, and policy analysts, among others.
