House of Commons - Health Committee: After Francis: Making A Difference - HC 657 Great Britain: Parliament: House of Commons: Health Committee,2013-09-18 The NHS needs to be an organization in which an open dialogue about care quality is part of the natural culture of the organization not a duty which only arises in cases of service failure Robert Francis made 290 recommendations in his report but in truth they boil down to just one that the culture of doing the system s business is pervasive in parts of the NHS and has to change Many who raise their concerns in the NHS at present risk serious consequences for their employment and professional status But disciplinary procedures professional conduct hearings and employment tribunals are not the proper place for honestly held concerns about patient safety and care quality to be aired constructively The NHS standard contract imposes a duty of candour on all NHS providers This is an essential principle but it is not adequately understood or applied It should mean that all providers create a culture which is routinely open both with their patients and their commissioners The same principle should apply to commissioners so that they are routinely open and accountable to local communities The Health Committee recommended this approach in 2011 and repeats that now It should be a prime role of the CQC to encourage the development of this culture within care providers and of NHS England to develop the same culture within commissioners The Health Committee will in future work closely with the Professional Standards Authority to develop the accountability process for professional regulators in healthcare Global Medical Physics Jacob Van Dyk,2025-11-18 Global Medical Physics A Guide for International Collaboration provides essential guidance for medical physicists and other healthcare professionals seeking to collaborate internationally in clinical educational and research settings With the growing interest in global health initiatives this book addresses the complexities of working across diverse healthcare environments particularly in low resource settings It explores the increasing role of medical physicists in international education training and research collaborations emphasizing the importance of cultural competence ethical considerations and overcoming technological barriers Features Explores the expanding role of medical
