PREVENT STROKE BEFORE IT STRIKES

Stroke prevention follows a similar principle of controlling risk factors. Up to 80% of strokes can be prevented through healthy lifestyle changes and working with healthcare practitioners to help manage your risks.

MOVE MORE

Do at least 2 1/2 hours of moderate to strenuous exercise each week.

EAT A HEALTHY DIET

Stay away from trans and saturated fats, reduce salt intake, and avoid processed foods.

DRINK MODERATELY

Drink in moderation to prevent risk factors caused by alcohol that can lead to stroke.

QUIT SMOKING

For every five cigarettes a person smokes each day, the risk of having a stroke goes up by 1.2%. Quit now.

MANAGE OTHER CONDITIONS

Manage heart conditions that can increase your chances of getting a stroke.

CONTROL HIGH BLOOD PRESSURE

Hypertension is a major risk factor for stroke. Up to 40% of all strokes can be prevented with good blood pressure control.

BLOOD PRESSURE FLUCTUATES THROUGHOUT THE DAY.

To keep it in check, monitor it regularly at home.

Practice, Committee on Public Health Priorities to Reduce and Control Hypertension in the U.S. Population, 2010-08-13

Hypertension is one of the leading causes of death in the United States affecting nearly one in three Americans. It is prevalent in adults and endemic in the older adult population. Hypertension is a major contributor to cardiovascular morbidity and disability. Although there is a simple test to diagnose hypertension and relatively inexpensive drugs to treat it, the disease is often undiagnosed and uncontrolled. A Population Based Policy and Systems Change Approach to the Prevention and Control of Hypertension identifies a small set of high priority areas in which public health officials can focus their efforts to accelerate progress in hypertension reduction and control. It offers several recommendations that embody a population based approach grounded in the principles of measurement system change and accountability. The recommendations are designed to shift current hypertension reduction strategies from an individual based approach to a population based approach. They are also designed to improve the quality of care provided to individuals with hypertension and to strengthen the Center for Disease Control and Prevention's leadership in seeking a reduction in the sodium intake in the American diet to meet dietary guidelines. The book is an important resource for federal public health officials and organizations, especially the Center for Disease Control and Prevention as well as medical professionals and community health workers.

Evidence-based Management of Stroke José Biller, José M Ferro, 2011-06-01 Winner of a HIGHLY COMMENDED AWARD in the Neurology category of the 2012 BMA Medical Book Competition. More than five million people die from stroke each year. Stroke is also the leading cause of adult disability affecting over 20 million people worldwide with two thirds of stroke victims left permanently disabled. We now know that speed of intervention is critical and patient outcomes are determined by a very narrow therapeutic window during which physicians need to be able to make their choice of treatment rapidly based on the best evidence available. The purpose of this book is to review that evidence for both medical and surgical therapies as well as preventative strategies drawing on the expertise of leading international authorities to distinguish the issues for which there is a consensus on best practice from those for which the evidence remains inconclusive. For example, for patients with acute ischemic stroke the first choice is intravenous thrombolytic therapy but does a treatment window of 0-3 hours deliver outcomes significantly better than one of 3-4-5 hours? Arterial hypertension is the single most important modifiable risk factor for ischemic stroke but what are the effects of blood pressure reduction among acute stroke patients? How effective is blood pressure lowering in primary intracerebral hemorrhage? What are the arguments in favour of continuation

versus temporary discontinuation of antihypertensive therapy immediately after acute ischemic stroke Endovascular procedures carotid angioplasty stenting are increasingly important but what do the data tell us about their safety Or durability How do they compare with carotid endarterectomy The management of unruptured intracranial aneurysms is rife with controversies clip coil wait and watch The authors examine the evidence for and against Other sections examine the impact of various risk factors and special populations A section on stroke after cardiovascular surgeries reviews the incidence and management of stroke following a whole range of procedures Another examines special risks during pregnancy Lastly the book reviews our understanding of childhood stroke and presents current best practice recommendations for this most challenging group of patients

have paid relatively little attention to brain disorders. The negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.
