The Fusarium Laboratory Manual John F. Leslie, Brett A. Summerell, 2008-02-28 For the first time in over 20 years a comprehensive collection of photographs and descriptions of species in the fungal genus *Fusarium* is available This laboratory manual provides an overview of the biology of *Fusarium* and the techniques involved in the isolation identification and characterization of individual species and the populations in which they occur It is the first time that genetic morphological and molecular approaches have been incorporated into a volume devoted to *Fusarium* identification The authors include descriptions of species both new and old and provide protocols for genetic morphological and molecular identification techniques The *Fusarium* Laboratory Manual also includes some of the evolutionary biology and population genetics thinking that has begun to inform the understanding of agriculturally important fungal pathogens In addition to practical how to protocols it also provides guidance in formulating questions and obtaining answers about this very important group of fungi The need for as many different techniques as possible to be used in the identification and characterization process has never been greater These approaches have applications to fungi other than those in the genus *Fusarium* This volume presents an introduction to the genus *Fusarium* the toxins these fungi produce and the diseases they can cause The *Fusarium* Laboratory Manual is a milestone in the study of the genus *Fusarium* and will help bridge the gap between morphological and phylogenetic taxonomy It will be used by everybody dealing with *Fusarium* in the Third Millennium W F O Marasas Medical Research Council South Africa

Research on carbon-based and metal-based negative electrode materials via DFT calculation for high potassium storage performance: a review Yuefang Chen, Heyi Sun, Junpeng Guo, Yuwen Zhao, Huan Yang, Hongwei Li, Wei-Jie Li, Shulei Chou, Yong Jiang, Zhijia Zhang, 2023-10-12 The key R D concern in the domain of new energy in recent years has been the large scale development of electrochemical energy storage However the steep increase in pricing has constrained the further expansion of lithium ion batteries primarily due to the ongoing depletion of their scarce lithium supplies A potential candidate material at the moment is the potassium ion battery KIB which has an anode made of carbon and or an alloy and rich reserves offering an excellent theoretical capacity and ideal working voltage More significant advancements are still required to achieve long life and high energy density despite the fact that some significant

breakthroughs have been reported The most recent findings from research on carbon based graphite hard carbon HC and nanoporous carbon and alloy based mainly including Sb Sn P and its compounds anodes for KIBs are compiled in this document Numerous simulations at the atomic level based on particular chemical interactions phase transitions ion electron transport dynamics and conduction band spin utilizing density functional theory DFT calculations have been conducted to thoroughly investigate the storage mechanism of K on various electrode materials Moreover this paper examined contemporary structural modification techniques used in carbon and alloy based anode electrode materials and applied DFT calculations to confirm the advancement of its thorough tests To promote the manufacturing of rechargeable KIBs the challenges and potential of KIBs were also explored in future research
