OBJECTIVES

After completion of this experiment, the student Will be able to:

1. Define the following terms, phenotype, genotype, genetic cross, parental generation, first generation, second generation
2. Demonstrate the following skills necessary for genetic problems solving. determining the genotypes using the proper symbols, determining the gametes, produced by the parents in a given cross and determining the genotypes and phenotypes of the children in the next generation
3. Be able to solve problems of complete and incomplete dominance involving monohybrid crosses.
4. Understand the Principle of Independent Assortment.
5. Explain how sex is determined in mammals.
6. Solve problems involving sex-linked genes.

INTRODUCTION

In sexually reproducing organisms, genetic information is passed from parents to offspring by means of haploid gametes (eggs and sperm) which unite to form a diploid zygote. The zygote receives half of its chromosomes from its father and from its mother. The genotype of the offspring is determined by the type of alleles the parents pass on them, in turn, the alleles present in the offspring will influence the observable traits in the new individuals, given rise to their specific phenotypes.

Sepulveda,2013-01-22 This practical easy to use guide named to Doody's Core Titles 2013 addresses interference issues in all laboratory tests including patient epigenetics process of specimen collection enzymes biomarkers Clinicians and laboratory scientists can therefore rely on one reference which speaks to both

their needs of accurate specimen analysis and optimal patient care Erroneous hospital and pathology laboratory results can be confusing and problematic especially in acute care situations While some factors creating interference can be identified in the laboratory detecting many others is often dependent on clinical details unavailable to the laboratory scientists or pathologists Therefore clinicians must become proficient in identifying such erroneous reports and working with pathologists and laboratory scientists so that they can understand the source of such interferences correct the results and then decide what course of action must be followed for proper patient management

Named to Doody's Core Titles 2013 a collection development tool for health sciences libraries of all sizes by Doody Enterprises Practical information for both clinicians and laboratory scientists presented in the form of tables and charts for easy reference Focus on range and sources of interferences rather than details of toxicologic mechanisms which are well covered in toxicology textbooks Covers interferences across endocrine oncology hematology immunohistochemistry immunology serology microbiology and molecular testing
