Boninger,2020-11-09 Introductory Psychology in Modules Understanding Our Heads Hearts and Hands is a unique and comprehensive introduction to psychology It consists of 36 short modules that keep students engaged with humor a narrative style and hands on activities that facilitate interactive learning and critical thinking Each stand alone module focuses on a major topic in psychology from the brain sensation memory and cognition to human development personality social psychology and clinical psychology The modular format also allows a deep dive into important topics that have less coverage in other introductory psychology textbooks This includes cross cultural psychology stereotypes and discrimination evolutionary psychology sex and gender climate change health psychology and sport psychology This truly modular format ideal for both face to face and virtual learning makes it easy for instructors to customize their readings and assign exactly what they wish to emphasize The book also contains an abundance of pedagogical features including numerous hands on activities and or group discussion activities multiple choice practice quizzes and an instructor exam bank written by the authors By covering both classic and contemporary topics this book will delight students and instructors alike The modular format also makes this a useful supplementary text for classes in nursing medicine social work policing and sociology

**XXX International Congress of Psychology: Abstracts** Michele Robert,2017-10-03 The abstracts of the XXX International Congress of Psychology July 2012 Cape Town are published as a supplement to Volume 47 of the International Journal of Psychology The published volume includes the abstracts of the invited addresses symposia oral and poster presentations numbering over 5 000 separate contributions and creating an invaluable overview of the discipline of psychological science around the world today *An Ethics of Political Communication* Alexander Brown,2021-09-27 Working in the tradition of analytic philosophy Alexander Brown argues that many different forms of political communication or anti communication that often infuriate the public can also be ethically or morally objectionable These forms include question dodging offering scripted answers stonewalling not listening disseminating propaganda pandering being insincere giving false denials issuing revisionist interpretations refusing to take responsibility never apologising boasting and gaslighting Brown invokes a host of normative reasons including those having to do with epistemic arrogance interference in autonomy and violating the right to be heard This is not to say that all things considered politicians should never engage in dubious political communication Sometimes these are necessary evils Brown argues however that further moral inquiry is needed to show why they are evils and to determine when the use of these rhetorical tactics can be excessive unreasonable or out of place Key Features Identifies and conceptualises forms of dubious political communication Develops an ethical evaluation of political communication Considers possible justifications for the use of dubious political communication Makes practical recommendations on how to regulate unethical political communication **Encyclopedia of Science and Technology Communication** Susanna Hornig Priest,2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the

popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Investigations J. F. Caddy, Gary D. Sharp, 1986-01-01 The text is intended as supplementary reading for fisheries workers especially in developing countries who do not always have ready access to current literature on applied marine ecology An attempt is made to develop a wide range of concepts in a form that will hopefully encourage their incorporation into a practical decision making context The food web and associated trophic interactions form the principal theme in an approach that gives equal emphasis to qualitative as well as the less easily measured quantitative considerations An attempt is made to illustrate the consequences of the aggregated nature of much of marine production as well as the subsequent dispersal of production in space and time and how these processes affect the potential for economic harvest of commercial components of the ecosystem Separate sections touch on environmental influences on production relevant spatial and temporal scales for ecosystem analysis life history strategies diversity and stability the concepts of the ecological niche the community and the assemblage and outline some first steps towards quantifying production in marine ecosystems Different approaches to representing trophic and other interactions are discussed with examples from the literature Reference is made to several ecological subsystems in order to illustrate the main concepts presented These include the mangrove ecosystem the arcto boreal macrophyte community a mediterranean demersal fish assemblage and the oceanic ecosystem associated with high seas tuna stocks In practical terms it is concluded that the first and simplest approach to multispecies resource management is not necessarily the manipulation of individual food web components but the identification mapping and conservation of critical habitats especially centres of local production and their associated ecological dissipation structures
