This book constitutes the refereed proceedings of the 9th International Colloquium on Grammatical Inference ICGI 2008 held in Saint Malo France in September 2008. The 21 revised full papers and 8 revised short papers presented were carefully reviewed and selected from 36 submissions. The topics of the papers presented vary from theoretical results of learning algorithms to innovative applications of grammatical inference and from learning several interesting classes of formal grammars to applications to natural language processing. *Grammatical Inference: Algorithms and Applications* Pieter Adriaans, Henning

Fernau, Menno van Zaanen, 2002-09-11. The Sixth International Colloquium on Grammatical Inference ICGI2002 was held in Amsterdam on September 23-25th 2002. ICGI2002 was the sixth in a series of successful biennial international conferences on the area of grammatical inference. Previous meetings were held in Essex U.K., Alicante Spain, Montpellier France, Ames Iowa USA, Lisbon Portugal. This series of meetings seeks to provide a forum for the presentation and discussion of original research on all aspects of grammatical inference. Grammatical inference, the process of inferring grammars from given data, is a field that not only is challenging from a purely scientific standpoint but also finds many applications in real world problems. Despite the fact that grammatical inference addresses problems in a relatively narrow area, it uses techniques from many domains and is positioned at the intersection of a number of different disciplines. Researchers in grammatical inference come from fields as diverse as machine learning, theoretical computer science, computational linguistics, pattern recognition, and artificial neural networks. From a practical standpoint, applications in areas like natural language acquisition, computational biology, structural pattern recognition, information retrieval, text processing, data compression, and adaptive intelligent agents have either been demonstrated or proposed in the literature. The technical program included the presentation of 23 accepted papers out of 41 submitted. Moreover, for the first time, a software presentation was organized at ICGI. Short descriptions of the corresponding software are included in these proceedings too. **Grammatical Inference** Pieter Adriaans, Henning Fernau, Menno van

Grammatical Inference Wojciech Wiecek, 2016-10-25 This book focuses on grammatical inference presenting classic and modern methods of grammatical inference from the perspective of practitioners To do so it employs the Python programming language to present all of the methods discussed Grammatical inference is a field that lies at the intersection of multiple disciplines with contributions from computational linguistics pattern recognition machine learning computational biology formal learning theory and many others div Though the book is largely practical it also includes elements of learning theory combinatorics on words the theory of automata and formal languages plus references to real world problems The listings presented here can be directly copied and pasted into other programs thus making the book a valuable source of ready recipes for students academic researchers and programmers alike as well as an inspiration for their further development

Syntactic And Structural Pattern Recognition - Theory And Applications Horst Bunke, Alberto Sanfeliu, 1990-01-01 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read

individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book *Algorithmic Learning Theory* Marcus Hutter, Frank Stephan, Vladimir Vovk, Thomas Zeugmann, 2010-09-02 This volume contains the papers presented at the 21st International Conference on Algorithmic Learning Theory ALT 2010 which was held in Canberra Australia October 6-8 2010 The conference was co-located with the 13th International Conference on Discovery Science DS 2010 and with the Machine Learning Summer School which was held just before ALT 2010 The technical program of ALT 2010 contained 26 papers selected from 44 submissions and five invited talks The invited talks were presented in joint sessions of both conferences ALT 2010 was dedicated to the theoretical foundations of machine learning and took place on the campus of the Australian National University Canberra Australia ALT provides a forum for high quality talks with a strong theoretical background and scientific interchange in areas such as inductive inference universal prediction teaching models grammatical inference formal languages inductive logic programming query learning complexity of learning on-line learning and relative loss bounds semi-supervised and unsupervised learning clustering active learning statistical learning support vector machines Vapnik-Chervonenkis dimension probably approximately correct learning Bayesian and causal networks boosting and bagging information based methods minimum description length Kolmogorov complexity kernels graph learning decision tree methods Markov decision processes reinforcement learning and real world applications of algorithmic learning theory DS 2010 was the 13th International Conference on Discovery Science and focused on the development and analysis of methods for intelligent data analysis knowledge discovery and machine learning as well as their application to scientific knowledge discovery As is the tradition it was co-located and held in parallel with Algorithmic Learning Theory
