Connecting Physics Education Research and Practice Italo Testa, Marisa Michelini, Salvatore Esposito, 2025-08-15 This book presents a selection of the most recent research results from the Italian physics education research community aimed at enhancing the teaching and learning of physics The motivation for this publication arises from the lack of a comprehensive reference for teachers on research results in physics education Despite various physics curriculum reform initiatives such as the introduction of modern physics into high school curricula their effectiveness in improving the quality of physics teaching in schools has been limited The book offers a contextualized view of the main topics in physics education along with a comprehensive overview of the current challenges faced by physics education in Italy and abroad It also presents research findings that could potentially enhance students learning of physics Throughout the book the implications

of these studies are outlined acknowledging issues and knowledge gaps that will guide future research in physics education. Specifically rather than covering all the contents addressed in the physics curriculum the book presents research contributions that suggest potentially effective strategies, methods and practices at different school levels from primary school to secondary school and university level. Regarding physics content the book presents teaching proposals highlighting conceptual aspects and exemplary methodologies of interpretation in physics such as the physics of fluids and quantum mechanics. It also includes research contributions on different methods and proposals for implementing practical activities reflecting on the role of the laboratory in learning the discipline and providing examples of integrating experimental and cognitive skills. The book also addresses the role of affective variables such as physics identity, self-efficacy and attitudes toward physics in the learning process. Additionally studies on teachers' professional development are presented which can inform the design of proposals for educational paths and methods within a framework of close collaboration between schools and physics departments.

Methodological Approaches to STEM Education Research Volume 4 Peta J. White, Russell Tytler, Joseph Paul Ferguson, John Cripps Clark, 2023-09-21. The methodological explorations offered in this book and indeed the book series enable considerations of how research practices have profound implications for the purpose and nature of education. Methodological complexity and context specificity along with a need to ensure research participant consideration are revealed through thirteen chapters. These considerations continue to change the landscape of educational research particularly in the areas of mathematics, health and environmental education research. The authors featured in this volume think critically about education research design and practice as part of a considered and robust discussion of education research theory and practice that will inform and shape education systems in the future. Chapters explore co-design with teachers, researching for system change, the ethics of netnography, principles and practices of literature review and post-qualitative inquiry with overviews and practices, arts-based and interdisciplinary methodologies, self-study and auto-ethnography.

Design-Based Research in Education Zoi A. Philippakos, Emily Howell, Anthony Pellegrino, 2021-09-30.
