Radionov, Oleg A. Kravchenko, Victor I. Guzeev, Yuriy V. Rozhdestvenskiy, 2019-11-30 This book highlights recent findings in industrial manufacturing and mechanical engineering and provides an overview of the state of the art in these fields mainly in Russia and Eastern Europe A broad range of topics and issues in modern engineering are discussed including the dynamics of machines and working processes

friction wear and lubrication in machines surface transport and technological machines manufacturing engineering of industrial facilities materials engineering metallurgy control systems and their industrial applications industrial mechatronics automation and robotics The book gathers selected papers presented at the 5th International Conference on Industrial Engineering ICIE held in Sochi Russia in March 2019 The authors are experts in various fields of engineering and all papers have been carefully reviewed Given its scope the book will be of interest to a wide readership including mechanical and production engineers lecturers in engineering disciplines and engineering graduates **Applied Mechanical Design**

Ammar Grous, 2018-07-02 This book is the result of lessons tutorials and other laboratories dealing with applied mechanical design in the universities and colleges In the classical literature of the mechanical design there are quite a few books that deal directly and theory and case studies with their solutions All schools engineering colleges technical industrial and research laboratories and design offices serve design works However the books on the market remain tight in the sense that they are often works of mechanical constructions This is certainly beneficial to the ordinary user but the organizational part of the functional specification items is also indispensable Chemical Kinetics with Mathcad and Maple Viktor

Korobov, Valery Ochkov, 2011-05-26 The authors explain at length the principles of chemical kinetics and approaches to computerized calculations in modern software suites mathcad and maple Mathematics is crucial in determining correlations in chemical processes and requires various numerical approaches Often significant issues with mathematical formalizations of chemical problems arise and many kinetic problems can't be solved without computers Numerous problems encountered in solving kinetics calculations with detailed descriptions of the numerical tools are given Special attention is given to electrochemical reactions which fills a gap in existing texts not covering this topic in detail The material demonstrates how these suites provide quick and precise behavior predictions for a system over time for postulated mechanisms Examples i.e oscillating and non isothermal reactions help explain the use of mathcad more efficiently Also included are the results of authors own research toward effective computations *Mathcad 15 / Mathcad Prime 1.0* Кирьянов Дмитрий
