Facilitator's Guide to Ways to Think about Mathematics Steven Benson, 2005 Facilitating mathematical investigations with teachers will help improve their teaching Because a student's learning depends so heavily on teacher quality districts and state departments of education colleges and universities are called upon to strengthen their teacher preparation and professional development programs Yet college mathematics courses are often criticized for being disconnected from the mathematics that teachers are asked to teach The Facilitator's Guide to Ways to Think About Mathematics is designed to close this gap National and state standards and frameworks suggest that mathematical investigation problem solving and exploratory learning should play a central role in mathematics lessons It is therefore necessary for teachers to experience mathematical explorations as learners themselves which places new demands on professional development facilitators and preservice educators This guide provides resources for facilitators to use while they are planning and implementing courses and workshops using Ways to Think About Mathematics This guide and the accompanying CD ROM contain Commentary on the activities Pedagogical suggestions materials sequencing promoting active participation adapting to the needs of particular teachers Various solution strategies
