Probabilistic Finite Element Model Updating Using Bayesian Statistics Tshilidzi Marwala, Ilyes Boulkaibet, Sondipon Adhikari, 2016-09-23 Probabilistic Finite Element Model Updating Using Bayesian Statistics Applications to Aeronautical and Mechanical Engineering Tshilidzi Marwala and Ilyes Boulkaibet University of Johannesburg South Africa Sondipon Adhikari Swansea University UK Covers the probabilistic finite element model based on Bayesian statistics with applications to aeronautical and mechanical engineering Finite element models are used widely to model the dynamic behaviour of many systems including in electrical aerospace and mechanical engineering The book covers probabilistic finite element model updating achieved using Bayesian statistics The Bayesian framework is employed to estimate the probabilistic finite element models which take into account of the uncertainties in the measurements and the modelling procedure The Bayesian formulation

achieves this by formulating the finite element model as the posterior distribution of the model given the measured data within the context of computational statistics and applies these in aeronautical and mechanical engineering Probabilistic Finite Element Model Updating Using Bayesian Statistics contains simple explanations of computational statistical techniques such as Metropolis Hastings Algorithm Slice sampling Markov Chain Monte Carlo method hybrid Monte Carlo as well as Shadow Hybrid Monte Carlo and their relevance in engineering Key features Contains several contributions in the area of model updating using Bayesian techniques which are useful for graduate students Explains in detail the use of Bayesian techniques to quantify uncertainties in mechanical structures as well as the use of Markov Chain Monte Carlo techniques to evaluate the Bayesian formulations The book is essential reading for researchers practitioners and students in mechanical and aerospace engineering Applied Bayesian Hierarchical Methods Peter D. Congdon, 2010-05-19 The use of Markov chain Monte Carlo MCMC methods for estimating hierarchical models involves complex data structures and is often described as a revolutionary development An intermediate level treatment of Bayesian hierarchical models and their applications Applied Bayesian Hierarchical Methods demonstrates the advantages of a Bayesian approach **Modeling, Dynamics, Optimization and Bioeconomics II** Alberto A. Cultures of Prediction Ann Johnson, Johannes Lenhard, 2024-05-07 A probing examination of the dynamic history of predictive methods and values in science and engineering that helps us better understand today s cultures of prediction The ability to make reliable predictions based on robust and replicable methods is a defining feature of the scientific endeavor allowing engineers to determine whether a building will stand up or where a cannonball will strike *Cultures of Prediction* which bridges history and philosophy uncovers the dynamic history of prediction in science and engineering over four centuries Ann Johnson and Johannes Lenhard identify four different cultures or modes of prediction in the history of science and engineering rational empirical iterative numerical and exploratory iterative They show how all four develop together and interact with one another while emphasizing that mathematization is not a single unitary process but one that has taken many forms The story is not one of the triumph of abstract mathematics or technology but of how different modes of prediction complementary concepts of mathematization and technology coevolved building what the authors call cultures of prediction The first part of the book examines prediction from early modernity up to the computer age The second part probes computer related cultures of prediction which focus on making things and testing their performance often in
