Michael L. Berins, 2012-12-06 I am pleased to present the Fifth Edition of the Plastics Engineering Handbook Last published in 1976 this version of the standard industry reference on plastics processing incorporates the numerous revisions and additions necessitated by 14 years of activity in a dynamic industry At that last printing then SPI President Ralph L Harding Jr anticipated that plastics production would top 26 billion pounds in 1976 up from 1.25 billion in 1947 when the First Edition of this book was issued As I write plastics production in the United States had reached almost 60 billion pounds annually Indeed the story of the U.S. plastics industry always has been one of phenomenal growth and unparalleled innovation While these factors make compilation of a book such as this difficult they also make it necessary Thus I

acknowledge all those who worked to gather and relate the information included in this 1991 edition and thank them for the effort it took to make the Plastics Engineering Handbook a definitive source and invaluable tool for our industry Larry L.

Thomas President The Society of the Plastics Industry Inc *Thermoplastics* D.P. Bashford, 2012-12-06 The overall aim of this book is to aid the process of sourcing and selecting appropriate thermoplastic polymers There are now a wide diversity of thermoplastics offered for commercial uses At one end of the range are the high volume commodity materials for short life consumer applications Whereas at the other end are the high value engineering materials with significant levels of mechanical physical and electrical performance Within this publication the generic groups of thermoplastics can be identified along with their respective attributes and limitations All thermoplastics are available in different grades The constituents selected to form a grade are chosen to modify aspects of material behaviour both during processing and in the final moulded form The directory addresses materials which can be obtained in granular powder or paste form for subsequent processing

Information is not provided directly on semi finished product forms such as films fibres sheet or profiles other than when inferred from the processing descriptions of specified grades The directory covers virgin or compounded material It does not specifically address reclaimed or recycled grades Data is provided for the mechanical and physical properties of moulded grades as processed by the route intended by the primary manufacturer M or compounder C Material grades can be obtained from a number of sources either the original polymer manufacturer or a recognised compounder who produces a range of grades
