Foundations of Theoretical Approaches in Systems Biology Alberto Marin-Sanguino, Julio Vera, Rui Alves, 2019-01-11 If biology in the 20th century was characterized by an explosion of new technologies and experimental methods that of the 21st has seen an equally exuberant proliferation of mathematical and computational methods that attempt to systematize and explain the abundance of available data As we live through the consolidation of a new paradigm where experimental data goes hand in hand with computational analysis we contemplate the challenge of fusing these two aspects of the new biology into a consistent theoretical framework Whether systems biology will survive as a field or be washed away by the tides of future fads will ultimately depend on its success to achieve this type of synthesis The famous quote attributed to Kurt Lewin comes to mind there is nothing more practical than a good theory This book presents a wide assortment of articles on systems biology in an attempt to capture the variety of current methods in systems biology and show how they can help to find answers to the challenges of modern biology

A First Course in Systems Biology Eberhard O. Voit, 2012-03-28 A First Course in Systems Biology is a textbook designed for advanced undergraduate and graduate students Its main focus is the development of computational models and their applications to diverse biological systems Because the biological sciences have become so complex that no individual can acquire complete knowledge in any given area of specialization the education of future systems biologists must instead develop a student's ability to retrieve reformat merge and interpret complex biological information This book provides the reader with the background and mastery of methods to execute standard systems biology tasks understand the modern literature and launch into specialized courses or projects that address biological questions using theoretical and computational means The format is a combination of instructional text and references to primary literature complemented by sets of small scale exercises that enable hands on experience and larger scale often open ended questions for further reflection
