Richeson, 2019-07-23 How a simple equation reshaped mathematics Leonhard Euler's polyhedron formula describes the structure of many objects from soccer balls and gemstones to Buckminster Fuller's buildings and giant all carbon molecules Yet Euler's theorem is so simple it can be explained to a child From ancient Greek geometry to today's cutting edge research Euler's Gem celebrates the discovery of Euler's beloved polyhedron formula and its far reaching impact on topology the study of shapes Using wonderful examples and numerous illustrations David Richeson presents this mathematical idea's many elegant and unexpected applications such as showing why there is always some windless spot on earth how to measure the acreage of a tree farm by counting trees and how many crayons are needed to color any map Filled with a who's who of brilliant mathematicians who questioned refined and contributed to a remarkable theorem's development Euler's Gem will fascinate every mathematics enthusiast This paperback edition contains a new preface by the author **777 Mathematical Conversation Starters** John de Pillis, 2002 Illustrated book showing that there are few degrees of separation between mathematics and topics that provoke interesting conversations The Lighter Side of Mathematics: Proceedings of the Eugene Strens Memorial Conference on Recreational Mathematics and Its History Richard K. Guy, Robert E. Woodrow, 2020-08-03 In August of 1986 a special conference on recreational mathematics was held at the University of Calgary to celebrate the founding of the Strens Collection Leading practitioners of recreational mathematics from around the world gathered in Calgary to share with each other the joy and spirit of play that is to be found in recreational mathematics It would be difficult to find a better collection of wonderful articles on recreational mathematics by a more distinguished group of authors If you are interested in tessellations Escher tilings Rubik's cube pentominoes games puzzles the arbelos Henry Dudeney or change ringing then this book is for you *Mathematics* E. Complex Numbers and Geometry Liang-shin Hahn, 2019-12-26 The purpose of this book is to demonstrate that complex numbers and geometry can be blended together beautifully This results in easy proofs and natural generalizations of many theorems in plane geometry such as the Napoleon theorem the Ptolemy Euler theorem the Simson theorem and the Morley theorem The book is self contained no background in complex numbers is assumed and can be covered at a leisurely pace in a one semester course Many of the chapters can be read independently Over 100 exercises are included The book would be suitable as a text for a geometry course or for a problem solving seminar or as enrichment for the student who wants to know more

Relearning Mathematics Rina Zazkis, 2011-08-01 This book is grounded in the author's experiences of teaching mathematics for prospective elementary school teachers and conducting research on their understanding of mathematical concepts It is a reflection on practice and an attempt to cope with a double challenge that of a teacher in helping prospective teachers make sense of mathematics and that of a researcher in an attempt to understand and describe the challenges faced by students This work fits within the current community interest on teacher education and provides a novel focus with both theoretical and practical considerations The central claim in this book is that encounters with mathematical content by prospective elementary school teachers constitute relearning rather than learning of mathematics The specific focus is on topics related to elementary number theory e g divisibility prime factorization which is referred to as a forgotten queen following Gauss reference to number theory as a queen of mathematics This is the content area that has not received significant attention in mathematics education research The book can be summarized as an attempt to address the following questions What is relearning of mathematical content and how is it similar to or different from learning What are the examples of specific mathematical topics or concepts that require relearning What pedagogical approaches can support relearning The detailed analysis of research data and pedagogical approaches presented in the book are intertwined with stories of personal experiences of the author which makes the reading not only intellectually stimulating but also enjoyable

The Trisectors Underwood Dudley, 2019-07-01 Underwood Dudley is well known for his collection of books on mathematical cranks Here he offers yet another angle trisectors It is impossible to trisect angles with straightedge and compass alone but many people try and think they have succeeded This book is about angle trisections and the people who attempt them According to Dudley Hardly any mathematical training is necessary to read this book There is a little trigonometry here and there but it may be safely skipped There are hardly any equations There are no exercises and there will be no final examination The worst victim of

Proofs

and Confirmations David M. Bressoud, 1999-08-13 This is an introduction to recent developments in algebraic combinatorics and an illustration of how research in mathematics actually progresses The author recounts the story of the search for and discovery of a proof of a formula conjectured in the late 1970s the number of $n \times n$ alternating sign matrices objects that generalize permutation matrices While apparent that the conjecture must be true the proof was elusive Researchers became drawn to this problem making connections to aspects of invariant theory to symmetric functions to hypergeometric and basic hypergeometric series and finally to the six vertex model of statistical mechanics All these threads are brought together in Zeilberger's 1996 proof of the original conjecture The book is accessible to anyone with a knowledge of linear algebra Students will learn what mathematicians actually do in an interesting and new area of mathematics and even researchers in combinatorics will find something new here

Julia: A Life in Mathematics Constance Reid, 2020-08-03 In high school Julia Bowman stood alone as the only girl and the best student in the junior and senior math classes She had only one close friend and no boyfriends Although she was to learn that there are such people as mathematicians her ambition was merely to get a job teaching mathematics in high school At great sacrifice her widowed stepmother sent her to the University of California at Berkeley But at Berkeley in a society of mathematicians she discovered herself There was also a prince at Berkeley a brilliant young assistant professor named Raphael Robinson Theirs was to be a marriage that would endure until her death in 1985 Julia is the story of Julia Bowman Robinson the gifted

and highly original mathematician who during her lifetime was recognized in ways that no other woman mathematician had ever been recognized This unusual book brings together in one volume the prize winning Autobiography of Julia Robinson by her sister the popular mathematical biographer Constance Reid and three very personal articles about her work by outstanding mathematical colleagues

Mathematical Puzzle Tales Martin Gardner, 2020-04-06 Martin Gardner is widely known for his writing on recreational mathematics not least for the myriad problems he has devised over some 25 years for Scientific American In this book are 36 of his best brainteasers These are not simply cunning puzzles but serve to illustrate the art of the mathematician as problem solver and their solution draws on ideas from topology probability number theory logic and beyond Fully worked answers are given which in turn lead to additional problems for the reader For anybody who likes to solve mathematical problems this book will be both entertaining and a challenge

Mathematical Fallacies, Flaws, and Flimflam Edward Barbeau, 2000-06-15 Through hard experience mathematicians have learned to subject even the most evident assertions to rigorous scrutiny as intuition and facile reasoning can often lead them astray However the impossibility and impracticality of completely watertight arguments make it possible for errors to slip by the most watchful eye They are often subtle and difficult of detection When found they can teach us a lot and can present a real challenge to straighten out Presenting students with faulty arguments to troubleshoot can be an effective way of helping them critically understand material and it is for this reason that I began to compile fallacies and publish them first in the Notes of the Canadian Mathematical Society and later in the College Mathematics Journal in the Fallacies Flaws and Flimflam section I hoped to challenge and amuse readers as well as to provide them with material suitable for teaching and student assignments This book collects the items from the first eleven years of publishing in the CMJ One source of such errors is the work of students Occasionally a text book will weigh in with a specious result or solution Nonprofessional sources such as newspapers are responsible for a goodly number of mishaps particularly in arithmetic especially percentages and probability their use in classrooms may help students become critical readers and listeners of the media Quite a few items come from professional mathematicians The reader will find in this book some items that are not erroneous but seem to be These need a fuller analysis to clarify the situation All the items are presented for your entertainment and use The mathematical topics covered include algebra trigonometry geometry probability calculus linear algebra and modern algebra
