Human Anatomy and Physiology

Part I: July 13th, AM

1. **What should Henry do to save Mark? What caused Mark's weakness, nausea, disorientation, headache, and low blood pressure? Why isn't he sweating?**
 - a. Henry should attempt to get Mark in shade, remove extra clothes, and cool him with cool water. Feeling weak, nausea, disorientation, headaches, and low blood pressure are all symptoms of a heat stroke. Mark suffered a heat stroke because he was in a temperature above 104 Fahrenheit for a prolonged amount of time. Mark isn't sweating because his body is so dehydrated that it ran out of water to sweat and body's cooling system stopped working because his body temperature has risen very high in a short amount of time.

Part II: July 13th, PM

2. **Why didn't the paramedic give Mark distilled water rather than an electrolyte/glucose solution?**
 - a. The paramedic didn't give Mark distilled water because distilled water would not rehydrate and provide energy like the electrolyte and glucose solution would.
3. **Why did Mark become disorientated? How would you test your ideas to see if you are right? What do you think based on the information in the text?**
 - a. Mark became disorientated because his blood pressure was low, due to dehydration, which meant that his brain was not getting the needed amount of blood pumped to it. To test my idea I could test the mental capabilities of people with different blood pressure.

Part III: Subsequent Months

4. **What should Mark be concerned with regarding these moles? He talked to dermatologist Dr. Charles Culp about the moles. What tests might Dr. Culp conduct after removing the moles?**
 - a. The moles could be cancerous (especially because he had a first degree burn). Dr. Culp should conduct a biopsy on the removed moles.
