

The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrograde motion is an apparent change in direction, with Mars having a faster orbit than Earth. As Earth orbits the Sun, it passes Mars. As it does so, it looks like it's going backward, or retrograde. This is because Earth is moving faster than Mars, so it appears to be moving backward.

4) Explain why we see Mars and not some of the Jovian planets for this reason.

The Jovian planets are much farther away, and their orbits take longer, so the retrogrades would be harder to readily see.
