Laboratory experiments are a vital part of engineering education which historically were considered impractical for distance learning. This book presents a guide for the practical employment of a heat transfer virtual lab for students and engineers. Inside the authors have detailed this virtual lab which is designed and can implement a real time robust and scalable software system that provides easy access to lab equipment anytime and anywhere over the Internet. They introduce and explain LabVIEW in easy to understand language. LabVIEW is a proprietary software tool by National Instruments and can be used to develop fairly complex instrumentation systems measurement and control. Fridman and Mahajan combined Internet capabilities with traditional laboratory exercises to create an efficient environment to carry out interactive on line lab experiments. Thus the virtual lab can be used from a remote location as a part of a distance learning strategy. With this book you will be capable of executing VIs Virtual Instruments specially developed for the experiment in question providing you with great ability to control the remote instrument and to receive and present the desired experimental data.
