

$$I \propto V$$

or

$$V \propto I \text{ or } V = RI$$

where R is a constant called “resistance” of the conductor. The value of this constant depends on the nature, length, area of cross-section and temperature of the conductor.

■ Graph between V and I

If a graph is drawn between potential difference (V) and the corresponding current (I), the graph is found to be a straight line passing through the origin. This is in accordance with Ohm’s Law which states that

$$V \propto I$$

I.e., when potential difference increases, the current I also increases, but the ratio V/I remains constant. This constant is called the resistance of the conductor. Resistance is calculated by using the slope of V versus I graph (Fig. 4.1).

$$\text{I.e., } R = \frac{\Delta V}{\Delta I}$$

where, $\Delta V = AC$; $\Delta I = BC$

■ Circuit diagram

Here A is ammeter, K is plug key, R_h is rheostat, V is voltmeter and R is resistance.

Fig. 4.1 Graph between V and I

PROCEDURE

1. Note the least count and range of the given ammeter and the voltmeter.
2. Clean the terminals of the given ammeter and voltmeter with the help of a sand paper. Also clean the ends of the connecting wires by using the sand paper.
3. Connect the components in the circuit as shown in the circuit diagram (Fig. 4.2) while keeping the key open. The voltmeter is connected across the specimen wire and the ammeter is in series with it.
4. Check the polarity of the ammeter and voltmeter in relation to the battery polarity. Also, see that the rheostat is connected properly, that is, one connection from the circuit to be made to the upper terminal (sliding contact) and the lower terminal at the other end of the rheostat be connected to the other side of the circuit.
5. Check your circuit in the manner as shown, before performing the experiment. Slide the rheostat contact to include maximum resistance in the circuit. Close the key. Ammeter and voltmeter reading will be minimum in this position. Move the slider of the rheostat to reduce resistance to minimum and see if the ranges covered over the voltmeter and ammeter are nearly 75% of the full scale. If not, either motors of lower range or battery of higher voltage should be used.
6. Now start taking the observations. Slide back the rheostat for minimum reading in the ammeter, say
