### **Introduction/Fossils**

The fossil record is a topic of special interest to many professional scientists and amateurs alike. Ask your instructor if your class members may bring any fossils that they have on a shelf or in a drawer at home to class. Try to estimate their position in the fossil record. Perhaps your instructor can arrange for a resource person to help with identification. This is a great time to share special interests with each other. In the absence of such specimens or resources, pictures or articles are the next best thing. The Internet is loaded with images. Use the resources in your community to do some personal research. Think about some common misconceptions that are sometimes reinforced by movies or the popular media such as human interaction with dinosaurs. Check the time lines and see how many years separate evidence of these creatures with man on earth.

### **Comparative Anatomy**

A tool for you to learn how to observe and compare various characteristics is a dichotomous key. The following classification exercise uses different types of screws to teach this identification technique.

Many of the early biologists studied the structure of organisms. As a result of these studies, many of our methods of classification (taxonomy) of plants and animals are based on the structures of organisms.

In any plant or animal, there may be hundreds, even thousands, of characteristics that appear to separate it from all other organisms. Experience has shown, however, that most of these are not extremely important in determining the species of the organism. Usually only a few characteristics are valuable in determining the species. But if you were given an organism to classify you would probably be both amazed and confused by the large number of characteristics that are present. Which characteristics do you use in classifying this organism? The answer is simple, you must center your attention on just a few critical characteristics and disregard the others. Wouldn't it be nice if the plants and animals on earth only showed these critical characteristics? Unfortunately, plants and animals do not exist in this manner.

Walker-Pacheco, 2017-02-01 Exploring Physical Anthropology is a comprehensive full color lab manual intended for an introductory laboratory course in physical anthropology. It can also serve as a supplementary workbook for a lecture class particularly in the absence of a laboratory offering. This laboratory manual enables a hands on approach to learning about the evolutionary processes that resulted in humans through the use of numerous examples and exercises. It offers a solid grounding in the main areas of an introductory physical anthropology lab course: genetics, evolutionary forces, human osteology, forensic anthropology, comparative functional skeletal anatomy, primate behavior, paleoanthropology, and modern human biological variation.    **The Forensic Anthropology Laboratory** Michael W. Warren, Heather A. Walsh-Haney, Laurel Freas, 2008-05-09 While other books cover general topics and various subsets of forensic anthropology, this one of a kind reference compiles the best practices of policies, procedures, and protocols of different laboratories across the world. This book brings together experts in every aspect of forensic anthropology to consider physical plant demands, equipment needs, staffing, ethical issues, and the process of certification with the American Society of Crime Laboratory Directors. With examples of implementation, The Forensic Anthropology Laboratory also provides discussion of proven methods in skeletal preparation, laboratory flow, and specimen curation, including processing logs and sample forms.

**Biology Laboratory Manual** Sylvia S. Mader, 2000-07 Mader includes revised coverage of animal behaviour and ecology as well as a wealth of new focus boxes which highlight topics of high interest and relate biology to everyday life.
