

Model 8096 shown with optional equipment

GENERAL DESCRIPTION

The Lab-Volt Radar Training System consists of seven subsystems (Models 8096-1 to 8096-8). Subsystems 8096-1 to 8096-3 provide students with hands-on training in the principles and operation of analog and digital radar, as well as radar tracking systems. Subsystem 8096-4 adds an active jamming pod trainer to the system to train students in the principles and scenarios of Electronic Warfare (EW). Subsystem 8096-5 is a sophisticated pulse-mode, radar cross-section (RCS) measurement training system with inverse synthetic-aperture radar (ISAR) imagery capability that is specifically designed for operation at close range. Subsystem 8096-6 provides students with training in the principles of electronically steered antennas. Finally, subsystem 8096-8 introduces students to the basic principles and operation of synthetic aperture radar (SAR).

The Radar Training System uses patented technology to detect and track passive targets at very short range in the presence of noise and clutter. The very low transmitter power allows for safe operation in a variety of training environments.

Radar Training System Features

- Active, real-time radar system operating in a classroom laboratory
- Low power, safe operation
- Latest technology, e.g., microstrips, Surface Mounted Devices (SMD's), Digital Signal Processing (DSP), and Fast Fourier Transform (FFT)
- Pulsed, continuous wave (CW), Doppler, and frequency-modulated continuous wave (FM-CW) modes of operation
- A-scope display output
- Plan Position Indicator (PPI) display on a computer monitor (on-screen PPI display) with fixed-intensity, intensity-modulated, color-modulated, and color-coded (weather radar) display modes
- Conventional PPI display capability (vector scan output)
- Moving Target Indication (MTI) processor for fixed-target echo cancellation and clutter rejection
- Sensitive Moving Target Detection (MTD) processor that differentiates between fixed and slowly moving targets at short range

galois cohomology wikipedia - Aug 14 2023

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group G associated to a field extension L/K acts in a natural way on some abelian groups for example those constructed directly from L but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
