Guide to Reference and Information Sources in the Zoological Sciences Diane Schmidt, 2003-11-30. Animals have been studied for centuries. But what are the most important and relevant reference and information sources in the zoological sciences? This work is a comprehensive thoroughly annotated directory filled with hundreds of esteemed resources published in the field of zoology including indexes, abstracts, bibliographies, journals, biographies, and histories, dictionaries, and encyclopedias, textbooks, checklists, and classification schemes, handbooks, and field guides, associations, and Web sites. A complete revision of the award-winning *Guide to the Zoological Literature: The Animal Kingdom* 1994, this new title includes extensive up-to-date coverage of invertebrates, arthropods, vertebrates, fishes, amphibians, and reptiles, birds, and mammals. In addition, the work features a detailed introduction by the author as well as thorough subject, title, and author indexes. Students and researchers can now quickly and easily pinpoint works in their field of study. The book is of equal importance to LIS students specializing in science or biology librarianship as it provides a comprehensive straight-forward overview of zoological information sources. An essential addition to the core reference collection of public and academic libraries.

Ebook: Vertebrates: Comparative Anatomy, Function, Evolution Kenneth Kardong, 2014-10-16. This one semester text is designed for an upper level majors course. Vertebrates features a unique emphasis on function and evolution of vertebrates, complete anatomical detail, and excellent pedagogy. Vertebrate groups are organized phylogenetically and their systems discussed within such a context. Morphology is foremost, but the author has developed and integrated an understanding of function and evolution into the discussion of anatomy of the various systems.

Metazoa - Morphology and Evolution of Animals Achim Paululat, Günter Purschke, 2025-08-23. Over the course of evolution, multicellular animals (Metazoa) have successfully colonized every conceivable habitat on our planet thanks to their ability to survive and adapt under adverse or changing conditions. But how

is an animal's body structured to accomplish this What organs do animals have how do they perceive their environment and what is the evolutionary relationship between these seemingly so different organisms This volume designed as a modern practical book presents the most important body plans of selected animals It is intended to help all Biology students to recognize and understand the basic body shapes and structures in the respective animal groups including the main features that have contributed to their evolutionary success the similarities and differences and the many different solutions that evolution has come up with for given biological problems The authors have consistently used focused compact text and photographs that not only show the animals most important external features but also explain the dissection process step by step The authors hope that this new book will help all Biology students successfully complete their practical zoology course and gain new insights into the morphology and evolution of animals
