God Genes And Consciousness Nonhuman Intervention In Human History:

Gods, Genes, and Consciousness Paul Von Ward, 2004 New edition published as *We're Not Alone* Whether you call them gods, angels, ETs, aliens, or spirit entities, sufficient proof now exists to make the case that history has been influenced by beings more advanced than humans. The evidence suggests they shaped our religions, genes, technology, and cultures. In fact, the impetus for modern civilization appears due to their intervention. Analysis of all types of reported nonhuman consciousness reveals a generic category the author calls Advanced Beings or ABs. A review of sacred texts, myths, and legends, and contemporary reports shows all such entities fit into a natural universe. It includes allegedly divine beings, heavenly hosts, guardians, ascended masters, and intelligences from other planets or other dimensions. Whether from the Pleiades or Yahweh's Heaven, historical, archeological, and scientific evidence now shows we've had their help along the way. While scientists, religious leaders, and governments continue to ignore or deny it, our very identity as a species and its psychological health hang in the balance. How to deal with the effects of such contacts lies at the center of a covert struggle for control of human consciousness. Startlingly, Von Ward explains why institutions do not want to address this question. And he shows how generations have been conditioned to ignore or suppress a significant part of their experience despite the fact that thousands daily still claim contact with a God or another AB. How did humans reach the point where leaders claim to speak for God in such conflicting ways? Paul Von Ward, also author of *Our Solarian Legacy*, says resolving the religious and ideological divisions that energize modern terrorism requires people East and West to re-examine the origins of notions like divine revelation, chosen people, and a supernatural religion.

Genes, Genesis, and God
Holmes Rolston, 1999-02-13 Can the phenomena of religion and ethics be reduced to the phenomena of biology Holmes Rolston says no and in this sweeping account of the subject written with considerable verve and clarity he challenges the sociobiological orthodoxy that would naturalize science ethics and religion The book is thoroughly up to date on current biological thought and is written by one of the most well respected figures in the philosophy of biology and religion It is likely to provoke considerable controversy among a wide range of readers in such fields as philosophy religious studies and biology

amazing story unfolds of two Gods one who doesn't exist whom we created ourselves and one who does exist whom we didn't create. The first of these gods is the familiar God of human history the God or gods we believed in just about forever then very recently dumped. An unpredictable and judgmental God who seemed occasionally to do right by us but more often went AWOL just when we needed them the most. We lived in constant fear of offending them and were terrified that if we didn't play our cards right in this life they'd consign us to hell in a handcart in the next. Good riddance to the God who doesn't exist. The God who exists however is a very different god to the one who doesn't. Their primary quality seems to be something vastly more urgent for the human race than providing daily bread saving us from enemies and forgiving our sins it is selfless love teaching. Yes the acquisition of the capacity for intentional selfless cooperation is a fundamental evolutionary imperative essential for our survival and flourishing generally especially critical right now when we seem to be on the brink of self destruction. Self destruction yes will we survive the latest threats of global warming nuclear pandemic uncontrolled development of AI. Will the selfless love teaching God who exists ride to our rescue just in the nick of time. Read on then if you dare and find out.

Playing God? Ted Peters, 2014-04-04. Since the original publication of *Playing God* in 1996 three developments in genetic technology have moved to the center of the public conversation about the ethics of human bioengineering. Cloning the completion of the human genome project and most recently the controversy over stem cell research have all sparked lively debates among religious thinkers and the makers of public policy. In this updated edition Ted Peters illuminates the key issues in these debates and continues to make deft connections between our questions about God and our efforts to manage technological innovations with wisdom.

Dawkins' GOD Alister E. McGrath, 2004-11-30. Alister E. McGrath is one of the world's leading theologians with a doctorate in the sciences. Richard Dawkins is one of the bestselling popular science writers with outspoken and controversial views on religion. This fascinating and provoking work is the first book length response to Dawkins' ideas and offers an ideal introduction to the topical issues of science and religion. Addresses fundamental questions about Dawkins' approach to science and religion. Is the gene actually selfish? Is the blind watchmaker a suitable analogy? Are there other ways of looking at things? Tackles Dawkins' hostile and controversial views on religion and examines the religious implications of his scientific ideas making for a fascinating and provoking debate. Written in a very engaging and accessible style ideal to those approaching scientific and religious issues for the first time. Alister McGrath is uniquely qualified to write this book. He is one of the world's best known and most respected theologians with a strong research background in molecular biophysics. A superb book by one of the world's leading theologians which will attract wide interest in the growing popular science market similar to Susan Blackmore's *The Meme Machine* 1999.
