Amputations Gloria T. Sanders, Bella J. May, 1986 The primary initial effort in every case of disease or injury should be to save the extremity Amputation is seldom necessary following bone and joint injuries More often it is an admission of defeat in the medical management of the patient with vascular disease In such cases it should be performed only as a last resort The longest possible lever arm consistent with primary healing should be maintained for maximum proprioceptive and kinesthetic feedback and thus rehabilitation potential Limb Amputation R. Ham, L. T. Cotton, 2013-12-20 The majority of amputations in the western world today are due to vascular disease Despite the advances in surgical treatment of this disease particularly by reconstruction it is a sad fact that the number of amputations performed in these countries each year for vascular disease

is increasing Most of these amputees are elderly and their life expectancy is short so it is important that the treatment and rehabilitation that they receive is informed appropriate efficient and swift to enable them to return successfully to life in the community for their remaining years Management of this group of patients has proved to be successful only if a multidisciplinary team approach is adopted Until recently in the UK this approach sadly has only been implemented by a few centres However with the publication of the McColl report into the prosthetic and wheelchair service in 1986 interest in the care of the amputee is growing throughout the country This book covers all aspects of amputation from disease and diagnosis to rehabilitation and community discharge with emphasis on the man agerneut of the largest group the vascular lower limb amputee A team approach is described and emphasized as being essential for good results and subsequent successful return into the community The role of each of the important disciplines is described in relation to the appropriate part of the rehabilitation phase

Neuropathic Pain Jianguo Cheng, 2019-01-21 Neuropathic pain is one of the most common most debilitating most costly and most difficult to treat categories of chronic pain conditions that are characterized by a lesion or disease of the somatosensory nervous system Managing neuropathic pain is challenging and requires skillful assessment and comprehensive and integrated treatment strategies that are mechanism guided evidence based and individualized However these critical and integral elements are very fragmented in the current literature The mechanistic understanding of neuropathic pain is typically found in basic research articles Clinical research evidence is presented in forms of clinical trials with emphasis on minimizing biases such as those from patient selection and assessment Individualized considerations for each patient are usually presented in case reports and problem based learning discussions This book overcomes these barriers and integrates all the critical elements around individual patient care into a coherent management strategy that is practical and applicable to daily clinical practice Rather than compiling what have been published in the literature this work emphasizes on identifying and highlighting the key points or findings that guide decision making in clinical practice It integrates the key points around a typical case scenario that not only represents the core of the diagnostic and therapeutic processes but also allows introduction and differentiation of painful conditions that bare similarities with the case in hand The overarching goal is to improve clinical outcomes through better understanding of the mechanisms more accurate diagnosis and wiser and more comprehensive treatment strategies
